

Part 91

CAA Consolidation

General Operating and Flight Rules

DESCRIPTION

Part 91 is an important rule as it forms the basis of general operating and flight rules for the Mongolian aviation environment. The requirements ensure that the safe operation of aircraft is possible with the minimum endangerment to persons and property.

Part 91 applies to all operators of aircraft as well as passengers by establishing—

- general rules applicable to operators and passengers
- operating and general flight rules
- rules for VFR and IFR operations
- instruments and

This document is the current consolidated version of Part 91 produced by the Civil Aviation Authority, and serves as a reference only. It is compiled from the official ordinary rules that have been signed into law by the Minister of Road and Transport. Copies of the official rule and amendments as signed by the Minister of Road and Transport may be obtained from the Civil Aviation Authority or may be downloaded from the official web site at: www.mcaa.gov.mn

Bulletin

Subject to “Memorandum for Technical Cooperation” between the CAA of Mongolia and New Zealand on mutual cooperation in implementation of the International Civil Aviation Organization Resolution of Global Rule Harmonization, which urges States to promote global harmonization of national rules, dated 6th of May, 1999, Mongolian Civil Aviation Safety Regulation has been reconciled to the Civil Aviation Regulation of New Zealand.

Part 91 first came into force on 05 June 2003, and now incorporates the following amendments:

Amendment	Effective Date
Amendment 1	14 September 2005
Amendment 2	18 September 2007
Amendment 3	30 May 2008
Amendment 4	11 September 2008
Amendment 5	16 April 2010
Amendment 6	11 January 2013
Amendment 7	12 September 2014
Amendment 8	01 March 2016

This Part 91 Amend.8 was developed based on NZCAR Part 91 Amend.25, dated on 24 September 2015.

Note: This Part 91 has been released in English and Mongolian languages. In the event of any conflict and discrepancy between the two above mentioned versions, English version shall prevail.

List of Rules

Subpart A — General	8
91.1 Purpose.....	8
91.5 Compliance with crew instructions and commands	9
91.7 Portable electronic devices	9
91.9 Carriage and discharge of firearms	9
91.11 Prohibition against interference with aircraft and aviation facilities	11
91.13 Aircraft noise and vibration	11
91.15 Fuelling of aircraft	11
Subpart B — Operating	11
91.101 Aircraft airworthiness.....	11
91.103 Restricted category airworthiness certificate -operating limitations	12
91.105 Special category airworthiness certificates - operating limitations.....	12
91.107 Aircraft registration	14
91.109 Aircraft flight manual.....	14
91.111 Documents to be carried	14
91.112 Daily flight records.....	15
91.113 Aircraft flight crew members	15
91.115 Flight attendant requirements.....	15
91.117 Designation of pilot-in-command	16
91.119 Aircraft taxiing.....	16
91.121 Stowage of passenger service equipment.....	16
91.123 Flight instruction	16
91.125 Simulated instrument flight	16
91.127 Use of aerodromes.....	17
91.129 Restricted and danger areas	18
91.131 Low flying zones.....	18
91.133 Military operating areas	19
91.135 Mandatory broadcast zones	19
91.137 Volcanic hazard zones	20
91.139 General aviation areas.....	20
Subpart C — General Flight Rules	20
91.201 Safety of aircraft	20
91.203 Authority of the pilot-in-command.....	21
91.205 Crew members at stations.....	21
91.207 Occupation of seats and wearing of restraints.....	21
91.209 Use of oxygen equipment.....	22
91.211 Passenger briefing	22
91.213 Carry-on baggage	23
91.215 Carriage of cargo.....	23
91.217 Preflight action	24
91.219 Familiarity with operating limitations and emergency equipment.....	24
91.221 Flying equipment and operating information	24
91.223 Operating on and in the vicinity of an aerodrome	25
91.225 Operations at aerodromes with air traffic services.....	26

91.227	Operating near other aircraft	26
91.229	Right-of-way rules	27
91.231	Right-of-way rules - water operations.....	28
91.233	Aircraft lights.....	28
91.235	Dropping of objects	28
91.237	Aircraft speed	28
91.239	Altimeter settings.....	29
91.241	Compliance with ATC clearances and instructions.....	29
91.243	ATC light signals	29
91.245	Operations in controlled airspace.....	30
91.246	Operations in RNP designated airspace	30
91.247	Use of SSR transponder and altitude reporting equipment	32
91.249	Aircraft callsigns	33
91.251	Time-in-service recorder operation.....	33
Subpart D	— Visual Flight Rules	33
91.301	VFR meteorological minima	33
91.303	Special VFR weather minima	34
91.305	Fuel requirements for flight under VFR	35
91.307	VFR flight plan.....	35
91.309	Position reports	36
91.311	Minimum heights for VFR flights.....	36
91.313	VFR cruising altitude and flight level	37
91.315	Operating in snow and ice conditions.....	37
Subpart E	— Instrument Flight Rules	37
91.401	Minimum flight crew.....	37
91.403	Fuel requirements for flights under IFR	38
91.405	IFR alternate aerodrome requirement	38
91.407	IFR flight plan	39
91.409	Adherence to flight plan.....	39
91.411	Inadvertent change to flight plan	40
91.413	Take-off and landing under IFR.....	40
91.415	Category II and III precision approach procedures.....	41
91.417	Category II and III precision approach procedure manual.....	42
91.419	Approval of category II and III precision approach procedure manual.....	43
91.421	Operating in icing conditions	44
91.423	Minimum altitudes for IFR flights	44
91.425	IFR cruising altitude or flight level.....	44
91.427	IFR radio communications.....	45
91.429	IFR operations - radio communications failure	45
91.431	Notification of facility malfunctions.....	46
Subpart F	— Instrument and Equipment Requirements	47
91.501	General requirements.....	47
91.503	Location of instruments and equipment.....	47
91.505	Seating and restraints	47
91.507	Passenger information signs	48

91.509	Minimum instruments and equipment.....	48
91.511	Night VFR instruments and equipment.....	49
91.513	VFR communication equipment	49
91.515	Communication and navigation equipment - VFR over water	49
91.517	IFR instruments and equipment	50
91.519	IFR communication and navigation equipment.....	50
91.521	Category II and III precision approach equipment	51
91.523	Emergency equipment	52
91.525	Flights over water	53
91.527	Aircraft operations on water.....	54
91.529	Emergency locator transmitter.....	54
91.531	Oxygen indicators.....	55
91.533	Supplemental oxygen for non-pressurised aircraft	55
91.535	Supplemental oxygen for pressurised aircraft	56
91.537	Inoperative instruments and equipment	57
91.539	Approval of minimum equipment list.....	58
91.541	SSR transponder and altitude reporting equipment.....	58
91.543	Altitude alerting system or device - turbojet or turbofan	59
91.545	Assigned altitude indicator.....	59
91.547	Ejection seats and explosive devices	60
Subpart G — Operator Maintenance Requirements		60
91.601	Purpose	60
91.602	Maintenance requirements before flight	60
91.603	General maintenance requirements.....	61
91.605	Maintenance programmes and schedules.....	61
91.607	Approval of maintenance programmes.....	64
91.609	Changes to maintenance programmes and schedules	65
91.611	Inspection planning latitude	66
91.613	Operational flight check	66
91.615	Review of airworthiness	66
91.616	Maintenance logbooks	67
91.617	Maintenance records	67
91.619	Technical log	67
91.621	Transfer of maintenance records.....	68
91.623	Retention of records	68
Subpart H — Special Flight Operations		68
91.701	Aerobatic flight.....	68
91.703	Aviation events	69
91.705	Parachute-drop operations	70
91.707	Emergency parachute assemblies	71
91.709	Towing gliders	71
91.711	Towing objects other than gliders.....	72
Subpart I — Foreign Registered Aircraft Operations and Operation of Mongolian Registered Aircraft Outside Mongolia		72
91.751	Applicability	72
91.753	Operations of Mongolian registered aircraft outside Mongolia	72

91.755	Special rules for foreign aircraft operations	73
Subpart J	— Operating Noise Limits	73
91.801	Purpose	73
91.803	Aircraft noise level compliance	73
91.805	Aircraft sonic boom.....	74
91.807	Engine emission compliance	74
Appendix A	— Instrument and equipment specifications.....	75
A.1	Markings and placards.....	75
A.2	Fuel and oil markings.....	75
A.3	Seating	75
A.4	Restraints.....	75
A.5	Child restraint systems	75
A.6	Aircraft lights	76
A.7	Aircraft time-in-service recorders	76
A.8	Pressure altimeters.....	76
A.9	Communication and navigation equipment	77
A.10	RNP, MNPS, and VSM equipment.....	78
A.11	Category II and III equipment	78
A.12	First aid kits	79
A.13	Fire extinguishers	79
A.14	Emergency equipment	80
A.15	Emergency locator transmitters.....	80
A.16	Oxygen	82
A.17	Passenger oxygen masks	82
A.18	Crew member on-demand oxygen masks	82
A.19	Oxygen equipment	82
A.20	Protective breathing equipment.....	83
A.21	Crew member portable protective breathing equipment.....	83
A.22	Transponder equipment	83
A.23	Altitude encoder equipment.....	83
A.24	Altitude alerting system or device.....	83
A.25	Parachute assembly for emergency use	83
A.26	Glider tow lines.....	84
Appendix B	– Transitional arrangements N/A.....	84

Subpart A — General

91.1 Purpose

- (a) This Part prescribes general operating and flight rules for the operation of civil aircraft.
- (b) Subject to paragraphs (c)(1) and (d), the following rules also apply to any aircraft operated by the Mongolian Defence Force within the territorial limits of Mongolia:
- (1) Rule 91.129:
 - (2) Rules 91.223 to 91.225, when operating in the vicinity of civil aircraft:
 - (3) Rule 91.229, when operating in the vicinity of civil aircraft:
 - (4) Rule 91.233:
 - (5) Rule 91.241:
 - (6) Rules 91.245 to 91.247:
 - (7) Rule 91.309:
 - (8) Rule 91.313:
 - (9) Rules 91.407 to 91.411:
 - (10) Rules 91.425 to 91.427:
 - (11) Rule 91.431:
 - (12) Rule 91.541.
- (c) This Part does not apply to—
- (1) any unit of Mongolian Defence Force, or any aircraft operated by the Mongolian Defence Force acting in connection with—
 - (i) any war or other like emergency; or
 - (ii) the defence of Mongolia and other Mongolian interests; or
 - (iii) aid to the civil power in time of emergency; or
 - (iv) the provision of any public service; or
 - (v) any operation performed within a restricted, danger, or military operating area designated under Part 71 for military purposes; and
 - (2) persons operating aircraft to which Part 101 applies; and
 - (2A) a person operating an aircraft under the authority of an unmanned aircraft operator certificate granted under the Act and in accordance with Part 102 unless compliance with any of the requirements in this Part is required as a condition of operation; and
 - (3) persons and equipment to which Part 105 applies.
- (d) The following rules do not apply to any unit of Mongolian Defence Force or any aircraft operated by the Mongolian Defence Force performing training for an operation specified in paragraph (c)(1) if that training cannot be performed in accordance with the rule:
- (1) Rule 91.225(b):
 - (2) Rule 91.233:
 - (3) Rule 91.313, if training outside controlled airspace:
 - (4) Rule 91.407, if training outside controlled airspace:
 - (5) (5) Rule 91.427, if training outside controlled airspace.
- (e) N/A

91.5 Compliance with crew instructions and commands

A passenger shall comply with any commands given to them by the pilot-in-command pursuant to 91.203.

91.7 Portable electronic devices

(a) No person may operate, nor may any operator or pilot-in-command of an aircraft allow the operation of, any cellphone or other portable electronic device that is designed to transmit electromagnetic energy, on any aircraft while that aircraft is operating under IFR.

(b) Except as provided in paragraph (c), no person may operate, nor may any operator or pilot-in-command of an aircraft allow the operation of, any portable electronic device on any aircraft flying under IFR during an instrument approach or departure procedure or during any other critical phase of flight.

(c) Paragraph (b) does not apply to—

- (1) hearing aids;
- (2) heart pacemakers;
- (3) portable voice recorders;
- (4) electric shavers;
- (5) electronic watches; or
- (6) any other portable electronic device if the operator of the aircraft has determined that the portable electronic device to be operated will not cause interference with any aircraft system or equipment in the aircraft on which it is operated.

(d) In the case of—

- (1) an aircraft being operated on air transport operations, the determination required by paragraph (c)(6) must be made by the operator of the aircraft on which the particular device is to be used; and
- (2) any other aircraft, the determination required by paragraph (c)(6) may be made by the pilot-in-command or the operator of the aircraft on which the particular device is to be used.

91.9 Carriage and discharge of firearms

(a) Except as provided in paragraphs (c) and (e), no person may—

- (1) carry a firearm in an aircraft; or
- (2) cause a firearm to be carried in an aircraft; or
- (3) permit a firearm to be carried in an aircraft.

(b) Except as provided in paragraph (d) no person may discharge a firearm while on board an aircraft.

(c) A firearm may be carried in an aircraft if—

- (1) the firearm—
 - (i) is stowed in a place that is inaccessible to every person during flight; and
 - (ii) is disabled; or
- (2) the aircraft is being used solely for the carriage of the person or group of persons associated with the firearm; and—
 - (i) the operator permits the carriage of the firearm; and

- (ii) the firearm is disabled; or
- (3) the aircraft is carrying livestock and the operator considers it may be necessary to immobilise livestock for the safety of the aircraft or its occupants; or
- (4) the aircraft is being used for the purpose of shooting or immobilising animals on the ground if—
 - (i) the firearm is not loaded until the aircraft is in the area within which the firearm is intended to be discharged; and
 - (ii) the aircraft carries only those persons performing an essential function associated with the operation of the aircraft or the shooting or immobilisation of animals on the ground.
- (d) A firearm may be discharged—
 - (1) in an aircraft carrying livestock if a crew member considers it necessary to immobilise livestock for the safety of the aircraft or its occupants; or
 - (2) from an aircraft for the purpose of shooting or immobilising animals on the ground if—
 - (i) the discharge of the firearm does not pose a hazard or cause injury or damage to persons or property on the ground; and
 - (ii) the firearm is not discharged over any congested area of a city, town, or settlement or over any open air assembly of persons.
- (e) A firearm may be carried in an aircraft by a person employed by the police, another law enforcement agency, or a military service if—
 - (1) the aircraft is being operated on an air transport or commercial transport operation, carrying fare paying passengers and the person carrying the firearm—
 - (i) is lawfully entitled to carry a firearm in the course of their duties; and
 - (ii) is carrying the firearm in the course of their duties; and
 - (iii) has been approved to carry the firearm on the aircraft by the Director under paragraph (f); and
 - (iv) complies with any conditions or restrictions imposed by the Director under paragraph (f); or
 - (2) the aircraft is being operated solely for the carriage of police officers, law enforcement officers, military personnel, and persons under the care of such officers or personnel, and the firearm is unloaded; or
 - (3) the aircraft is being operated for a police, law enforcement, or military operation, and only persons performing an essential function associated with the police, law enforcement, or military operation, or the operation of the aircraft, are carried in the aircraft.
- (f) Upon application from the Police, the head of any other law enforcement agency, or the Chief of the Defence Force, the Director—
 - (1) may approve a police officer, a law enforcement officer, or a military service person to carry a firearm in an aircraft that is being operated on an air transport or commercial transport operation, carrying fare paying passengers, if the Police and the operator concerned consent to the carriage of a firearm in the aircraft; and
 - (2) may impose such conditions or restrictions as the Director considers appropriate; and
 - (3) must advise the applicant, the operator, and the Police of the decision.

(g) Unless otherwise determined by the Director, an application for approval under paragraph (f) must be made, to the Director at least one working day before the air transport or commercial air transport operation is intended to commence.

(h) Before the commencement of an air operation where a firearm will be carried in an aircraft by a person under paragraph (e)(1), the operator must inform the pilot-in-command of the number of persons carrying firearms and their position in the aircraft.

91.11 Prohibition against interference with aircraft and aviation facilities

A person must not tamper or interfere with any aircraft, any component of an aircraft, or its equipment, including, but not limited to, smoke detectors, or with fixed or mobile equipment used for the operation or navigation of any aircraft.

91.13 Aircraft noise and vibration

A person shall be barred by the Act from bringing an action for nuisance in respect of the noise or vibration caused by an aircraft or aircraft engine on an aerodrome if—

- (1) the aircraft is taking off or landing; or
- (2) the aircraft is manoeuvring on the ground or water; or
- (3) any person is operating any engine in the aircraft, prior to takeoff for the purpose of ensuring—
 - (i) satisfactory engine performance; or
 - (ii) that the instruments, accessories, or other components are in a satisfactory condition.

91.15 Fuelling of aircraft

A person refuelling or defuelling an aircraft must ensure that—

- (1) fuelling or defuelling of the aircraft is performed in compliance with the applicable requirements of the Joint Inspection Group (JIG); and
- (2) the aircraft is not refuelled or defuelled with Class 3.1A flammable liquid when a person is embarking, on board, or disembarking the aircraft, or when one or more of the propulsion engines are running; or
- (3) the aircraft is not refuelled or defuelled with a Class 3.1C or a Class 3.1D flammable liquid when a person is embarking, on board, or disembarking the aircraft.

Subpart B — Operating

91.101 Aircraft airworthiness

(a) Except as provided in paragraph (c), Part 103, and Part 106, a person must not operate an aircraft unless—

- (1) the aircraft—
 - (i) has a current airworthiness certificate; and
 - (ii) is in an airworthy condition; or
- (2) the aircraft is operated in accordance with a special flight permit issued in accordance with Part 21.

(b) A person operating an aircraft that has an airworthiness certificate or a special flight permit as required in paragraph (a) must comply with—

- (1) any operating limitations issued with the airworthiness certificate or special flight permit; and
 - (2) the markings and placards that are required by the Civil Aviation Rules to be displayed in the aircraft.
- (c) A person may operate an aircraft that does not have a current airworthiness certificate for the purpose of demonstrating the eligibility of the aircraft for the issue, renewal, or reinstatement of an airworthiness certificate if—
- (1) a type certificate or type acceptance certificate for the aircraft type is in force in accordance with Subpart B of Part 21; and
 - (2) the aircraft complies with the requirements prescribed in rule 21.191; and
 - (3) a person meeting an applicable requirement in rule 43.101(a)(1) to (5) certifies that the aircraft is fit for flight; and
 - (4) the pilot-in-command is the holder of an appropriate, current pilot licence and type rating or a validation permit, issued in accordance with Part 61 for the aircraft; and
 - (5) no other person is carried unless that person performs an essential function in connection with the operation.

91.103 Restricted category airworthiness certificate -operating limitations

No person shall operate an aircraft issued with a restricted category airworthiness certificate under Part 21, Subpart H for flight instruction other than—

- (1) conversion instruction for a type rating; or
- (2) flight instruction for the issue of an agricultural rating; or
- (3) flight instruction for the specific operational purpose for which the aircraft is certificated.

91.105 Special category airworthiness certificates - operating limitations

(a) Except as provided in paragraph (b), a person must not operate an aircraft that has a special category airworthiness certificate for the carriage of a person or goods for hire or reward.

(b) Paragraph (a) does not apply to a person operating an aircraft that has a special category airworthiness certificate if the carriage of a person is for hire or reward and—

- (1) the person being carried is the holder of a flight instructor rating issued by the Director under the Part 61 and—
 - (i) subject to paragraphs (e), (f)(2)(i), (g)(1), and (j)(2)(i) as appropriate, is giving flight instruction in the aircraft; or
 - (ii) is giving conversion instruction for an aircraft type rating on the aircraft; or
- (2) the person being carried is required to perform a function essential to the operation of the aircraft under paragraph (e); or
- (3) the aircraft has a special category - primary, special category -LSA, or special category - limited airworthiness certificate and is operated under the authority of an adventure aviation operator certificate that has been issued by the Director under the Part 115.

(c) Except if taking off or landing, a person must not operate an aircraft that has a special category airworthiness certificate over a congested area of a city or town unless the aircraft has been authorised to do so by the Director in writing.

- (d) A person operating an aircraft that has a special category airworthiness certificate must inform each person carried in the aircraft of the warning specified in the placard that is required by rule 21.205 to be installed in the aircraft.
- (e) Except as provided in paragraph (k), a person must not operate an aircraft that has a special category—experimental airworthiness certificate for any purpose other than—
- (1) researching and developing new aircraft design concepts, new aircraft equipment, new aircraft installations, new aircraft operating techniques, or new uses for aircraft; or
 - (2) showing that the aircraft complies with applicable airworthiness rules; or
 - (3) performing a flight evaluation; or
 - (4) giving conversion instruction for an aircraft type rating on the aircraft.
- (f) A person operating an aircraft that has a special category—exhibition airworthiness certificate—
- (1) must operate the aircraft in accordance with the operator statement required by rule 47.55(c) to accompany the certificate of registration for the aircraft; and
 - (2) must not operate the aircraft for any of the following purposes:
 - (i) giving flight instruction to a person for the issue of a pilot licence or rating, except for conversion instruction for an aircraft type rating on the aircraft, unless approved by the Director:
 - (ii) performing an agricultural aircraft operation:
 - (iii) performing a helicopter external load operation under Part 133 unless the performance of an external load operation is approved by the Director for participation in an aviation event:
 - (iv) the carriage of a person other than a person who is permitted to be carried in accordance with the operator statement required by rule 47.55(c) to accompany the certificate of registration for the aircraft, or who is carried under paragraph (2)(i).
- (g) A person must not operate an aircraft that has a special category—amateur-built airworthiness certificate for any of the following purposes:
- (1) giving flight instruction to a person for the issue of a pilot licence or rating, except for conversion instruction for an aircraft type rating on the aircraft, if the person is not the amateur constructor or owner of the aircraft:
 - (2) performing an agricultural aircraft operation:
 - (3) performing a helicopter external load operation under Part 133.
- (h) A person must not operate an aircraft that has a special category—primary airworthiness certificate for any of the following purposes:
- (1) performing an agricultural aircraft operation:
 - (2) performing a helicopter external load operation under Part 133.
- (i) A person must not operate an aircraft that has a special category—LSA airworthiness certificate to perform an agricultural aircraft operation.
- (j) A person operating an aircraft that has a special category—limited airworthiness certificate—
- (1) must operate the aircraft in accordance with the operator statement required by rule 47.55(c) to accompany the certificate of registration for the aircraft; and
 - (2) must not operate the aircraft for any of the following purposes:

- (i) giving flight instruction to a person for the issue of a pilot licence or rating, except for conversion instruction for an aircraft type rating on the aircraft, unless approved by the Director:
- (ii) performing an agricultural aircraft operation:
- (iii) performing a helicopter external load operation under Part 133:
- (iv) the carriage of more than the following number of persons:
 - (A) 10 persons for an aeroplane:
 - (B) 5 persons for a helicopter.

91.107 Aircraft registration

(a) Except as provided in paragraph (b), and Part 106, a person must not operate an aircraft unless it is registered and displays identification markings in accordance with the requirements of—

- (1) Part 47; or
- (2) the appropriate aeronautical authority of an ICAO Contracting State; or
- (3) the appropriate authority of another State that is party to an agreement with the Government of Mongolia or the Civil Aviation Authority of Mongolia, which provides for the acceptance of each other's registrations.

(b) Paragraph (a) does not apply to the holder of a manufacturing organisation certificate issued in accordance with Part 148 if—

- (1) the certificate holder holds a special flight permit—continuing authorisation issued in accordance with Part 21 for the aircraft; and
- (2) the aircraft is a new production aircraft undergoing flight testing.

91.109 Aircraft flight manual

No person shall operate an aircraft unless it is operated in compliance with the operating limitations specified in the aircraft flight manual.

91.111 Documents to be carried

Except as provided in Parts 103, 104, and 106, a person must not operate an aircraft unless the following documents are carried in the aircraft:

- (1) except if rule 91.101(c) applies, the current airworthiness certificate or a certified copy of the current airworthiness certificate:
- (2) the aircraft flight manual or an equivalent document acceptable to the Director:
- (3) for Mongolian registered aircraft:
 - (i) the technical log required under rule 91.619, unless for aircraft operating under an air operator certificate from a fixed base an alternative means acceptable to the Director is used to inform the pilot of the maintenance status of the aircraft:
 - (ii) a completed form CAA 2173 Weight and Balance Data or equivalent:
 - (iii) a completed form CAA 2129 Aircraft Radio Station Equipment Approval Levels:
- (4) for Mongolian registered aircraft operating outside of Mongolia:
 - (i) a copy of the General Radio User's Licence issued by the Authority:

- (ii) the current certificate of registration for the aircraft, or a certified copy of the certificate of registration:
- (5) for foreign aircraft operating within Mongolia:
 - (i) the current certificate of registration for the aircraft, or a certified copy of the certificate of registration:
 - (ii) written evidence that the aircraft complies with the requirements of rule 91.803(a)(2) regarding aircraft noise level compliance, and rule 91.807(2) regarding engine emission compliance.

91.112 Daily flight records

(a) Except as provided in paragraph (c), an operator of an aircraft must keep accurate daily flight records that contain for each flight the following—

- (1) the name of the operator:
- (2) the name of the pilot-in-command:
- (3) the names of other crew members:
- (4) the registration markings of the aircraft:
- (5) the date of the flight:
- (6) the purpose of the flight:
- (7) the time of commencement of the flight:
- (8) the name of the departure aerodrome:
- (9) the flight time.

(b) An operator must retain each daily flight record for a period of 12 months after the date of the flight.

(c) A person required to keep daily flight records under rules 115.455 or 135.857 is not required to comply with paragraphs (a) and (b).

91.113 Aircraft flight crew members

No person shall operate an aircraft without at least the number of flight crew members required by the aircraft flight manual.

91.115 Flight attendant requirements

(a) Except as provided in paragraph (b), no person may operate an aircraft carrying more than 19 passengers unless the minimum number of flight attendants carried as crew members on the aircraft are as follows—

- (1) for aircraft carrying more than 19 but less than 51 passengers, at least one flight attendant:
- (2) for aircraft carrying more than 50 but less than 101 passengers, at least two flight attendants:
- (3) for aircraft carrying more than 100 passengers, at least two flight attendants plus one additional flight attendant per every 50 passengers carried in addition to the first 100 passengers carried.

(b) A flight attendant is not required to be carried—

- (1) in an aircraft that is carrying persons engaged in parachute operations; or
- (2) in a balloon; or

- (3) N/A; or
 - (4) in an aircraft when the only passengers being carried in excess of 19 are children under 4 years of age who are carried in accordance with 91.207(d)(1) and the total number of passengers does not exceed 24.
- (c) No person may operate an aircraft carrying flight attendants who are not—
- (1) familiar with the necessary functions to be performed—
 - (i) in an emergency; and
 - (ii) in a situation requiring emergency evacuation; and
 - (2) capable of using the emergency equipment installed in that aircraft.

91.117 Designation of pilot-in-command

- (a) No person shall operate an aircraft with more than one pilot unless, when the flight is planned, the operator designates a pilot-in-command for each period of the flight.
- (b) For the purposes of this rule, operator means the person who causes or permits an aircraft to fly.

91.119 Aircraft taxiing

No person other than a flight crew member shall taxi an aircraft on the movement area of an aerodrome unless that person has been duly authorised by the operator or by a maintenance organisation, and—

- (1) is competent to taxi the aircraft; and
- (2) is competent to use the radiotelephone if radio communications are required; and
- (3) is familiar with the aerodrome layout and any procedures applicable to ground movements at that aerodrome.

91.121 Stowage of passenger service equipment

No person shall taxi, take-off, or land an aircraft equipped with—

- (1) any passenger food and beverage tray, or table; or
- (2) any passenger serving cart; or
- (3) any viewing screen that extends into the aisle— unless that equipment is secured in a stowed position.

91.123 Flight instruction

No person shall give flight instruction in an aircraft, except a balloon, unless that aircraft is equipped with—

- (1) fully functioning dual controls; or
- (2) pitch, roll, yaw, and engine power controls which can be operated at either crew station.

91.125 Simulated instrument flight

- (a) Except as provided in paragraph (b), no person may operate an aircraft in simulated instrument flight unless—

- (1) the aircraft has two pilot stations and one pilot station is occupied by a safety pilot who is the holder of a current pilot licence; and
 - (2) the safety pilot has—
 - (i) adequate vision forward and to each side of the aircraft; or
 - (ii) a competent observer to adequately supplement the vision of the safety pilot; and
 - (3) the aircraft is equipped with—
 - (i) fully functioning dual controls; or
 - (ii) pitch, roll, yaw, and engine power controls that can be operated from either pilot station.
- (b) A person may operate an aircraft in simulated instrument flight that does not comply with paragraph (a)(3) if—
- (1) the simulated flight is performed outside controlled airspace; and
 - (2) the means of simulating instrument flight can be removed rapidly by the pilot-in-command.

91.127 Use of aerodromes

- (a) No person may use any place as an aerodrome unless that place is suitable for the purpose of taking off or landing of the aircraft concerned.
- (b) No person may operate an aircraft at an aerodrome unless—
- (1) that person complies with any limitations and operational conditions on the use of the aerodrome notified by the aerodrome operator; and
 - (2) the runway, heliport, or water channel, is equipped with operable lighting, appropriate to that type of aircraft, when landing or taking off at night, and the lighting is activated; and
 - (3) that person manoeuvres the aircraft clear of any manoeuvring area or part of any manoeuvring area that has been notified or marked as unsafe for aircraft use by the aerodrome operator; and
 - (4) the runway, heliport, or water channel, is clear of all persons, animals, vehicles, vessels, or other obstructions during landing or take-off, other than persons, vehicles, or vessels essential to the operation.
- (c) No pilot may operate an aircraft in an aerodrome traffic circuit unless the aircraft can be manoeuvred—
- (1) clear of any obstructions; and
 - (2) without conflicting with the aerodrome traffic circuit or instrument approach procedure of any other aerodrome.
- (d) In addition to fulfilling the requirements of paragraphs (a), (b), and (c), no person may operate a helicopter without ensuring that—
- (1) any place used as a heliport or as a place to hover within a congested area of a city, town, or settlement has—
 - (i) physical characteristics; and
 - (ii) obstacle limitation surfaces; and
 - (iii) visual aids—

commensurate with the ambient light conditions and the characteristics of the helicopter being operated; and

- (2) any place used as a heliport or as a place to hover that is outside a congested area of a city, town, or settlement—
 - (i) is suitable for the helicopter to hover clear of obstructions; and
 - (ii) for a heliport, has a surface area suitable for touchdown and lift-off; and
- (3) unless the helicopter is a performance Class 1 helicopter, any place used as a heliport or as a place to hover has such approach and take-off paths that an autorotative landing can be conducted without causing a hazard to any persons or property on the surface.

91.129 Restricted and danger areas

(a) A pilot must not operate an aircraft within a restricted area designated under Part 71 unless that pilot—

- (1) has the approval of the administering authority responsible for the restricted area to operate within that area; and
- (2) complies with any conditions promulgated for operation within the restricted area; and
- (3) complies with any conditions imposed by the administering authority for operation within the restricted area.

(b) A pilot must not operate an aircraft within a danger area designated under Part 71 unless that pilot has determined that the activity associated with the danger area will not affect the safety of the aircraft.

91.131 Low flying zones

(a) A pilot must not operate an aircraft within a low flying zone designated under Part 71 —

- (1) during the night; or
- (2) during the day unless—
 - (i) the pilot—
 - (A) is receiving dual flight instruction; or
 - (B) holds an instructor rating issued under Part 61; or
 - (C) is briefed on the boundaries of the low flying zone and the method of entry and exit from the low flying zone and is authorised for that flight by the holder of an instructor rating issued under Part 61; and
 - (ii) the pilot has been briefed by the using agency on the conditions of operation for flight within the low flying zone; and
 - (iii) the pilot complies with the conditions of operation for flight within the low flying zone; and
 - (iv) before entering the low flying zone, the pilot broadcasts on the appropriate VHF frequency details of the flight and the proposed duration in the low flying zone; and
 - (v) the pilot maintains a listening watch on the appropriate VHF frequency while in the low flying zone and broadcasts or reports on vacating the low flying zone.

(b) A pilot operating an aircraft within a low flying zone designated under Part 71 must ensure that the aircraft is operated without hazard to persons or property on the surface.

- (c) A pilot operating an aircraft within a low flying zone designated under Part 71 must not carry a passenger on the aircraft.

91.133 Military operating areas

A pilot must not operate an aircraft within a military operating area designated under Part 71 unless the pilot—

- (1) has the approval of the administering authority responsible for the military operating area—
 - (i) to operate a Mongolian registered aircraft within the military operating area; or
 - (ii) to operate a foreign aircraft within any portion of the military operating area that is within the territorial limits of Mongolia; and
- (2) complies with any conditions promulgated for operation within the military operating area; and
- (3) complies with any conditions imposed by the administering authority for operation within the military operating area.

91.135 Mandatory broadcast zones

(a) Except as provided in paragraphs (b) and (c), a pilot must not operate an aircraft within a mandatory broadcast zone designated under Part 71 unless that pilot—

- (1) makes the following broadcasts on the radio frequency assigned to the mandatory broadcast zone:
 - (i) **at entry** - the aircraft callsign, position and altitude, and the pilot's intentions for flight within the mandatory broadcast zone:
 - (ii) **when joining the aerodrome traffic circuit of an aerodrome within the mandatory broadcast zone** – the aircraft callsign, position and altitude, and the pilot's intentions:
 - (iii) **before entering a runway for take-off from an aerodrome within the mandatory broadcast zone** – the aircraft callsign, the runway to be used for take-off, and the pilot's intentions for flight within the mandatory broadcast zone after take-off; and
 - (iv) **at any other time at least at the intervals prescribed for the mandatory broadcast zone** - the aircraft callsign, position and altitude, and the pilot's intentions for flight within the mandatory broadcast zone; and
- (2) maintains a listening watch on the radio frequency assigned to the mandatory broadcast zone; and
- (3) activates, if equipped, the aircraft's landing lights or anti-collision lights.

(b) Pilots of aircraft in formation may operate within a mandatory broadcast zone without complying with paragraphs (a)(1) and (a)(2), but only if—

- (1) all the pilots of the aircraft in formation comply with paragraph (a)(3); and
- (2) the pilot of the lead aircraft complies with paragraphs (a)(1) and (a)(2).

(c) A pilot-in-command of an aircraft without an operable radio may operate within a mandatory broadcast zone for the purpose of enabling repairs to be made to that radio, but only if—

- (1) the pilot-in command complies with paragraph (a)(3); and

- (2) if practicable, the pilot-in-command arranges for another person to make the broadcasts required in paragraph (a)(1) on the pilot's behalf.

(d) The pilot-in-command of a parachute-drop aircraft intending to drop a parachutist within or into a mandatory broadcast zone must make a broadcast on the radio frequency assigned to the mandatory broadcast zone stating the aircraft callsign, position, altitude, and the intentions of the person making the parachute descent before authorising that person to exit the aircraft to make the parachute descent.

91.137 Volcanic hazard zones

A pilot must not operate an aircraft within a volcanic hazard zone designated under Part 71—

- (1) during the night; or
- (2) in IMC; or
- (3) in VMC during the day unless the pilot determines that, after considering all of the following, the volcanic hazard will not affect the safety of the flight:
 - (i) relevant meteorological information contained in SIGMET;
 - (ii) NOTAM information;
 - (iii) other information provided for this purpose by an organisation that holds a meteorological service certificate issued by the Director under the Act and Part 174.

91.139 General aviation areas

A pilot must not operate an aircraft within a general aviation area designated under Part 71—

- (1) during the night; or
- (2) during the day unless—
 - (i) the general aviation area is active permanently during the day; or
 - (ii) if the general aviation area is made active by the approval of the ATC unit responsible for the airspace, an approval has been given by the ATC unit to operate within the general aviation area and the pilot complies with any request from the ATC unit to vacate the general aviation area; or
 - (iii) if the general aviation area is made active by notification from an airspace user to the ATC unit responsible for the airspace, prior notification has been given to the ATC unit, and the ATC unit has confirmed that the general aviation area is active.

Subpart C — General Flight Rules

91.201 Safety of aircraft

A pilot-in-command of an aircraft must—

- (1) before operating the aircraft, be satisfied that the aircraft is airworthy and in a condition for safe flight, after—
 - (i) the documents required under rule 91.111 have been inspected; and
 - (ii) the aircraft has been inspected; and
- (2) during the flight, ensure the safe operation of the aircraft and the safety of its occupants; and

- (3) on completion of the inspections required by paragraph (1), and on completion of the flight, record in the technical log or other equivalent document acceptable to the Director any aircraft defects that are identified by the crew during the inspections and during the flight.

91.203 Authority of the pilot-in-command

Each pilot-in-command of an aircraft shall give any commands necessary for the safety of the aircraft and of persons and property carried on the aircraft, including disembarking or refusing the carriage of—

- (1) any person who appears to be under the influence of alcohol or any drug where, in the opinion of the pilot-in-command, their carriage is likely to endanger the aircraft or its occupants; and
- (2) any person, or any part of the cargo, which, in the opinion of the pilot-in-command, is likely to endanger the aircraft or its occupants.

91.205 Crew members at stations

(a) Each crew member on duty during take-off and landing in an aircraft, other than in a balloon, shall—

- (1) be at their crew member station unless their absence is necessary to perform duties in connection with the operation of the aircraft; and
- (2) have their safety belt fastened while at the crew member station.

(b) Each crew member on duty during take-off and landing in an aircraft, other than in a balloon, shall have their shoulder harness fastened while at their crew member station, unless—

- (1) the seat at the crew member station is not equipped with a shoulder harness; or
- (2) the crew member would be unable to perform their duties with the shoulder harness fastened.

91.207 Occupation of seats and wearing of restraints

(a) A pilot-in-command of an aircraft must require each passenger to occupy a seat or berth and to fasten their safety belt, restraining belt or, if equipped, shoulder harness or single diagonal shoulder belt—

- (1) during each take-off and landing; and
- (2) when the aircraft is flying at a height of less than 1000 feet (300m) above the surface; and
- (3) at other times when the pilot-in-command considers it necessary for their safety; and
- (4) during aerobatic flight; and
- (5) at all times in an open cockpit aircraft.

(b) A pilot-in-command of an aircraft may permit a passenger to unfasten a shoulder harness or single diagonal shoulder belt—

- (1) during take-off and landing; and
- (2) when the aircraft is flying at a height of less than 1000 feet (300m) above the surface—

if the pilot-in-command is satisfied that such action is necessary for the passenger's performance of an essential function associated with the purpose of the flight.

- (c) A pilot-in-command of an aircraft must require each passenger to place their seat in the take-off and landing configuration during take-off and landing.
- (d) Paragraphs (a)(1), (2), and (3) do not apply to a child under 4 years of age if the child—
 - (1) is held by an adult who is occupying a seat or berth, and the child is secured by a safety belt attached to the adult's safety belt; or
 - (2) occupies a seat equipped with a child restraint system, if the child does not exceed the specified weight limit for that system and is accompanied by a parent, guardian, or by an attendant designated by the child's parent or guardian to attend to the safety of the child during the flight.
- (e) Paragraph (a) does not apply to passengers carried in balloons or engaged in parachute operations.

91.209 Use of oxygen equipment

- (a) A pilot-in-command of an unpressurised aircraft must, during any time that the aircraft is being operated above 13 000 feet (3900m) AMSL and during any period of more than 30 minutes that the aircraft is being operated between 10 000 feet (3000m) and up to and including 13 000 feet (3900m) AMSL, require—
 - (1) each crew member and each passenger to use supplemental oxygen; and
 - (2) each crew member to use portable oxygen equipment, including a regulator and attached oxygen mask, for any duty requiring movement from their usual station.
- (b) A pilot-in-command of a pressurised aircraft must—
 - (1) during any time the cabin pressure altitude is above 10 000 feet (3000m) AMSL, require—
 - (i) each crew member to use supplemental oxygen; and
 - (ii) each crew member to use portable oxygen equipment, including a regulator and attached oxygen mask, for any duty requiring movement from their usual station; and
 - (2) during any time the aircraft is being operated from flight level 350 up to and including flight level 410, require—
 - (i) one pilot at a pilot station to wear and use an oxygen mask that either supplies supplemental oxygen at all times or automatically supplies supplemental oxygen whenever the cabin pressure altitude exceeds 13 000 feet (3900m) AMSL; or
 - (ii) two pilots to be at their pilot stations and each pilot to have access to an oxygen mask that can be placed on the face and supplying oxygen within 5 seconds; and
 - (3) during any time the aircraft is being operated above flight level 410, require one pilot at a pilot station to wear and use a demand oxygen mask at all times.
- (c) A pilot-in-command of a pressurised aircraft must, following pressurisation failure, require each passenger to use supplemental oxygen during any time that the cabin pressure is above 14 000 feet (4200m) AMSL, unless the aircraft can descend to 14 000 feet (4200m) AMSL or below within 4 minutes.

91.211 Passenger briefing

- (a) A person operating an aircraft carrying passengers must ensure that each passenger has been briefed on—

- (1) the conditions under which smoking is permitted; and
 - (2) the applicable requirements specified in 91.121 and 91.207; and
 - (3) the location and means for opening the passenger entry doors and emergency exits; and
 - (4) when required to be carried by this Part—
 - (i) the location of survival and emergency equipment for passenger use; and
 - (ii) the use of flotation equipment required under 91.525 for a flight over water; and
 - (iii) the normal and emergency use of oxygen equipment installed in the aircraft for passenger use; and
 - (5) procedures in the case of an emergency landing; and
 - (6) the use of portable electronic devices in accordance with 91.7.
- (b) The briefing required under paragraph (a)—
- (1) must be given by the pilot-in-command, a member of the crew, a person nominated by the operator, or by a recorded presentation; and
 - (2) must, for flights above FL 250, include a demonstration on the use of supplemental oxygen equipment; and
 - (3) must include a demonstration on the use of life preservers when required to be carried by this Part; and
 - (4) must include a statement, as appropriate, that Civil Aviation Rules require passenger compliance with lighted passenger signs and crew member instructions; and
 - (5) may be supplemented by printed cards for the use of each passenger containing—
 - (i) diagrams of, and methods of operating the emergency exits; and
 - (ii) other instructions necessary for the use of emergency equipment intended for use by passengers; and
 - (6) is not required if the pilot-in-command determines that all the passengers are familiar with the contents of the briefing.
- (c) Where printed cards are used in accordance with paragraph (b)(5), the operator must place them in convenient locations on the aircraft for the use of each passenger and ensure that they contain information that is pertinent only to the type and model of aircraft on which they are carried.

91.213 Carry-on baggage

A person operating an aircraft, other than a balloon, must ensure that, before take-off or landing, all passenger baggage aboard the aircraft is stowed away—

- (1) in a baggage locker; or
- (2) under a passenger seat in such a way that it cannot—
 - (i) slide forward under crash impact; or
 - (ii) hinder evacuation of the aircraft in the event of an emergency.

91.215 Carriage of cargo

- (a) An operator must not permit cargo to be carried in an aircraft unless it is—
- (1) carried on a seat, in a cargo rack or bin, or in a cargo or baggage compartment; and

- (2) properly secured by a safety belt or other restraining device having enough strength to ensure that the cargo does not shift under all normally anticipated flight and ground conditions; and
 - (3) packaged and covered to avoid injury to passengers.
- (b) An operator who permits the carriage of cargo in an aircraft must not permit cargo—
- (1) to exceed the load limitation for the seats, berths, or floor structure as prescribed by the aircraft flight manual, or by placards; or
 - (2) to be located in a position that restricts the access to or use of any required emergency exit, or the use of the aisle between the crew and the passenger compartments.

91.217 Preflight action

Before commencing a flight, a pilot-in-command of an aircraft must obtain and become familiar with all information concerning that flight including—

- (1) where practicable, the current meteorological information; and
- (2) the fuel requirements; and
- (3) the alternatives available if the planned flight cannot be completed; and
- (4) any known or likely traffic delays that have been notified by ATS; and
- (5) the status of the communication and navigation facilities intended to be used; and
- (6) the current conditions of the aerodrome and runway lengths at aerodromes of intended use; and
- (7) any take-off and landing distance data contained in the aircraft flight manual; and
- (8) in the case of aircraft powered by two or more engines—
 - (i) engine inoperative procedures; and
 - (ii) one engine inoperative performance data.

91.219 Familiarity with operating limitations and emergency equipment

Each pilot of an aircraft shall, before beginning a flight, be familiar with—

- (1) the aircraft flight manual for that aircraft; and
- (2) any placards, listings, instrument markings, or any combination thereof, containing any operating limitation prescribed for that aircraft by the manufacturer or the Director; and
- (3) the emergency equipment installed on the aircraft; and
- (4) which crew member is assigned to operate the emergency equipment; and
- (5) the procedures to be followed for the use of the emergency equipment in an emergency situation.

91.221 Flying equipment and operating information

(a) A pilot-in-command of an aircraft must ensure that the following equipment and information, in current and appropriate form, is accessible to every flight crew member of the aircraft:

- (1) an accurate means of indicating the time:
- (2) appropriate aeronautical charts:

- (3) for IFR operations, every appropriate navigational en route, terminal area, approach, and instrument approach and departure chart;
 - (4) for night operations, an operable electric torch for every flight crew member.
- (b) In addition to paragraph (a), a pilot-in-command of an aircraft in excess of 5700 kg MCTOW, or having a certificated seating capacity of 10 passenger seats or more, must ensure that every flight crew member uses a cockpit checklist covering the normal and emergency procedures for the operation of the aircraft in accordance with the aircraft flight manual.

91.223 Operating on and in the vicinity of an aerodrome

- (a) Except as provided in paragraph (b), a pilot of an aeroplane operating on or in the vicinity of an aerodrome must—
- (1) observe other aerodrome traffic for the purpose of avoiding a collision; and
 - (2) unless otherwise authorised or instructed by ATC, conform with or avoid the aerodrome traffic circuit formed by other aircraft; and
 - (3) perform a left-hand aerodrome traffic circuit when approaching for a landing at and after take-off from an aerodrome that is published in the AIP Mongolia unless—
 - (i) the pilot is otherwise authorised or instructed by ATC; or
 - (ii) the IFR procedure published in the AIP Mongolia for the runway being used specifies a right-hand turn and the approach for landing or the take-off is being performed in accordance with the instrument procedure; and
 - (4) perform a right-hand aerodrome traffic circuit when approaching for a landing at and after take-off from an aerodrome that is published in the AIP Mongolia, if the details published in the AIP Mongolia for the aerodrome specify a right-hand aerodrome traffic circuit for the runway being used unless—
 - (i) the pilot is otherwise authorised or instructed by ATC; or
 - (ii) the IFR procedure published in the AIP Mongolia for the runway being used specifies a left-hand turn and the approach for landing or the take-off is being performed in accordance with the instrument procedure; and
 - (5) unless otherwise authorised or instructed by ATC, comply with any special aerodrome traffic rules for the aerodrome.
- (b) Paragraphs (a)(3), (a)(4), and (a)(5) do not apply to the pilot-in-command of an aircraft operating at an aviation event in accordance with rule 91.703.
- (c) Notwithstanding paragraphs (a)(3) and (a)(4), a pilot-in-command of an aircraft performing an agricultural aircraft operation from an aerodrome that is published in the AIP Mongolia may make turns in any direction when approaching for a landing or after take-off if—
- (1) the aerodrome does not have an aerodrome control service in attendance; and
 - (2) an aerodrome ground signal depicted in Figure 1 is displayed alongside the runway in use; and
 - (3) there is no conflict with other aerodrome traffic.
- (d) Subject to paragraphs (b) and (c), a pilot-in-command of a helicopter operating on or in the vicinity of an aerodrome must comply with paragraph (a) or avoid the aerodrome traffic circuit being used by an aeroplane operating on or in the vicinity of the aerodrome.

Figure 1. Agricultural operations aerodrome ground signal

91.225 Operations at aerodromes with air traffic services

(a) A pilot-in-command of an aircraft on or in the vicinity of an aerodrome with an aerodrome control service in operation must—

- (1) unless otherwise authorised by ATC, maintain two-way radio communications with that service on the prescribed frequency; and
- (2) obtain an ATC clearance from that service before—
 - (i) taxiing on any portion of the manoeuvring area; or
 - (ii) landing at or taking-off from any runway or heliport at that aerodrome; or
 - (iii) entering a control zone.

(b) A pilot-in-command of an aircraft on or in the vicinity of an aerodrome with an aerodrome flight information service in operation must—

- (1) if the aircraft is equipped with radio, maintain two-way radio communications with that service on the prescribed frequency; and
- (2) advise that service of the intended use of that aerodrome before
 - (i) taxiing on any portion of the manoeuvring area; or
 - (ii) landing at or taking-off from any runway or heliport at that aerodrome; or
 - (iii) entering the aerodrome traffic circuit at that aerodrome.

(c) A pilot-in-command of an aircraft that is not equipped with radio and that is on or in the vicinity of an aerodrome with an aerodrome flight information service in operation must advise that service of the intended use of the aerodrome before —

- (1) taxiing on to any portion of the manoeuvring area; and
- (2) entering the aerodrome traffic circuit at that aerodrome.

91.227 Operating near other aircraft

A pilot must not operate an aircraft—

- (1) so close to another aircraft as to create a collision hazard; or
- (2) in formation flight except by prior arrangement with the pilot-in-command of each aircraft in the formation; or
- (3) in formation flight while carrying passengers for hire or reward unless the requirements of paragraph (2) are met and the pilot is performing—
 - (i) a parachute-drop aircraft operation; or

- (ii) an adventure aviation formation flight operation under the authority of an adventure aviation operator certificate issued by the Director under Part 115.

91.229 Right-of-way rules

- (a) A pilot of an aircraft—
 - (1) must, when weather conditions permit, regardless of whether the flight is performed under IFR or under VFR, maintain a visual lookout so as to see and avoid other aircraft; and
 - (2) that has the right of way, must maintain heading and speed, but is not relieved from the responsibility of taking such action, including collision-avoidance manoeuvres based on resolution advisories provided by ACAS, that will best avert collision; and
 - (3) that is obliged to give way to another aircraft, must avoid passing over, under, or in front of the other aircraft, unless passing well clear of the aircraft, taking into account the effect of wake turbulence.
- (b) A pilot of an aircraft must, when approaching another aircraft head-on, or nearly so, alter heading to the right.
- (c) A pilot of an aircraft that is converging at approximately the same altitude with another aircraft that is to its right, must give way, except that the pilot operating—
 - (1) a power-driven heavier-than-air aircraft must give way to airships, gliders, and balloons; and
 - (2) an airship must give way to gliders and balloons; and
 - (3) a glider must give way to balloons; and
 - (4) a power-driven aircraft must give way to aircraft that are towing other aircraft or objects; and
 - (5) all aircraft must give way to parachutes.
- (d) A pilot of an aircraft that is overtaking another aircraft must, if a turn is necessary to avoid that aircraft, alter heading to the right, until the overtaking aircraft is entirely past and clear of the other aircraft.
- (e) For the purpose of paragraph (d), an overtaking aircraft is an aircraft that approaches another from the rear on a line forming less than 70 degrees with the plane of symmetry of the latter.
- (f) A pilot of an aircraft in flight or on the surface must—
 - (1) give way to any aircraft that is on final approach to land or is landing; and
 - (2) when the aircraft is one of 2 or more heavier-than-air aircraft approaching an aerodrome for the purpose of landing, give way to the aircraft at the lower altitude; and
 - (3) not take advantage of right-of-way under subparagraph (2) to pass in front of another aircraft, which is on final approach to land, or overtake that aircraft.
- (g) A pilot of an aircraft must not take off if there is an apparent risk of collision with another aircraft.
- (h) A pilot of an aircraft taxiing on the manoeuvring area of an aerodrome must—
 - (1) give way to aircraft landing, taking off, or about to take off; and
 - (2) when 2 aircraft are approaching head on, or nearly so, stop or, where practicable, alter course to the right so as to keep well clear of the other aircraft; and

- (3) when 2 aircraft are on a converging course, give way to other aircraft on the pilot's right; and
 - (4) when overtaking another aircraft, give way and keep well clear of the aircraft being overtaken.
- (i) A pilot of an aircraft must give way to any aircraft that is in distress.

91.231 Right-of-way rules - water operations

Each pilot of an aircraft on the water shall comply with the requirements of the International Regulations for Preventing Collisions at Sea.

91.233 Aircraft lights

- (a) A pilot of an aircraft must not—
- (1) operate an aircraft at night unless it has lighted position lights; or
 - (2) moor or move an aircraft at night on a water aerodrome unless the aircraft complies with the lighting requirement of the International Regulations for Preventing Collisions at Sea; or
 - (3) operate an aircraft at night that is required by Subpart F to be equipped with an anti-collision light system unless the anti-collision light system is operating.
- (b) A person must not park or move an aircraft at night on a manoeuvring area of an aerodrome that is in use for aircraft operations unless the aircraft—
- (1) is clearly illuminated; or
 - (2) has lighted position lights; or
 - (3) is in an area that is marked by obstruction lights.
- (c) Notwithstanding paragraph (a)(3), a pilot of an aircraft is not required to operate the anti-collision light system if the pilot determines that, because of operating conditions, it is in the best interest of safety to turn the system off.

91.235 Dropping of objects

A pilot of an aircraft shall not allow any object to be dropped from that aircraft in flight unless the pilot has taken reasonable precautions to ensure the dropping of the object does not endanger persons or property.

91.237 Aircraft speed

- (a) Except as provided in paragraph (b), a pilot must not operate an aircraft at an indicated speed of more than 250 kts below an altitude of 10 000 feet (3000m) AMSL when—
- (1) that aircraft is operated IFR in Class D, E, F, or G airspace; or
 - (2) that aircraft is operated VFR in Class C, D, E, F, or G airspace.
- (b) Paragraph (a) does not apply when—
- (1) the minimum safe speed of the aircraft prescribed in the flight manual is more than 250 kts and the aircraft is operated at that minimum safe speed; or
 - (2) the aircraft is being operated at an aviation event in accordance with 91.703.

91.239 Altimeter settings

(a) A pilot of an aircraft must maintain the cruising altitude or flight level of the aircraft by reference to an altimeter that is set in accordance with the following:

- (1) when operating at or above flight level 150, set altimeter to 1013.2 hPa:
- (2) when operating at or below 13 000 feet (3900m), set altimeter to the appropriate area QNH zone setting or aerodrome QNH altimeter setting:
- (3) when operating between 13 000 feet (3900m) and flight level 150, set altimeter to the appropriate area QNH zone setting as advised by an ATC unit.

(b) A pilot of an aircraft that is ascending or descending must set the altimeter in accordance with the following:

- (1) when ascending above 13 000 feet (3900m), set altimeter to 1013.2 hPa:
- (2) when descending through flight level 150, set altimeter to the appropriate area QNH zone setting or aerodrome QNH altimeter setting.

91.241 Compliance with ATC clearances and instructions

(a) A pilot of an aircraft operating in a control area or control zone designated under Part 71 must—

- (1) except when manoeuvring in accordance with an ACAS resolution advisory or a GPWS or TAWS alert, comply with any ATC clearance or instruction issued by the ATC unit responsible for the control area or control zone; and
- (2) when a deviation from an ATC clearance or instruction is required for the safe operation of the aircraft, notify ATC of the deviation as soon as possible.

(b) A pilot of an aircraft need not comply with an ATC clearance or instruction if compliance would cause the pilot to breach any rule in this Part.

(c) A pilot of an aircraft who elects not to comply with an ATC clearance or instruction under paragraph (b) must immediately notify the appropriate ATC unit of the non-compliance.

91.243 ATC light signals

Each pilot of an aircraft shall comply with the clearance or instruction specified for ATC light signals in Table 1.

Table 1. ATC light signals.

Light Signal	Aircraft in Flight	Aircraft on the Ground
Steady green	Cleared to land	Cleared for take-off
Steady red	Give way to other aircraft and continue circling	Stop
Series of green flashes	Return for landing (clearance to land and to taxi will be given in due course)	Cleared to taxi
Series of red flashes	Aerodrome unsafe, do not land	Taxi clear of landing area in use
Flashing white	Land at this aerodrome and proceed to apron	Return to starting point on aerodrome
Alternating red and green flashes	Danger, be on the alert	Danger, be on the alert

91.245 Operations in controlled airspace

- (a) Except as provided in paragraphs (e) and (f), a pilot-in-command of an aircraft must not enter a control area or control zone designated under Part 71 unless the pilot-in-command obtains an ATC clearance to enter the control area or control zone.
- (b) A pilot-in-command of an aircraft operating in Class A airspace must—
- (1) operate the aircraft under IFR; and
 - (2) unless otherwise authorised by the ATC unit responsible for the class A airspace, maintain two-way communications with that ATC unit on the appropriate frequency.
- (c) A pilot-in-command of an aircraft that operates in the following classes of airspace must maintain two-way radio communications with the ATC unit responsible for the airspace concerned on the appropriate frequency unless otherwise authorised by the ATC unit:
- (1) Class B, C, or D airspace;
 - (2) Class E airspace under IFR.
- (d) If different classes of airspace adjoin one above the other, a pilot operating at the common level may comply with the requirements of the less restrictive class of airspace.
- (e) A pilot of an aircraft operating under VFR does not require an ATC clearance to enter a control area that is classified under Part 71 as class E airspace.
- (f) Airspace within a control area and a control zone becomes uncontrolled class G airspace during those times when an air traffic control service is not being provided within that control area or control zone.

91.246 Operations in RNP designated airspace

- (a) A person must not operate an aircraft in RNP designated airspace in a Mongolian registered aircraft unless—
- (1) there is available in the aircraft a RNP operations procedures manual, incorporating all amendments, approved in accordance with this rule for that aircraft and aircraft navigation system; and
 - (2) the operations in RNP designated airspace are performed in accordance with the procedures, instructions, and limitations in the approved manual; and
 - (3) the instruments and equipment required by rule 91.519 for a particular RNP operation have been inspected and maintained in accordance with an approved maintenance programme; and
 - (4) each flight crew member has adequate knowledge of, and familiarity with—
 - (i) the aircraft; and
 - (ii) the aircraft navigation system; and
 - (iii) the procedures to be used, including the applicable contingency procedures; and
 - (5) each pilot-in-command ensures that the aircraft and aircraft navigation system are both approved by the Director for RNP operations and that the RNP performance can be met for the planned route and any alternate routes; and
 - (6) a flight plan is submitted to the appropriate ATS unit that includes in item 10 of the flight plan—
 - (i) the letter 'R' when indicating an aircraft approved for RNP operations; and
 - (ii) the letter 'G' when indicating an aircraft equipped with an approved GNSS capability.

- (b) Each operator of an aircraft performing RNP operations must keep a current copy of the RNP operation procedures manual at its principal base of operation and must make it available for inspection upon request by the Director.
- (c) Each applicant for the approval of a RNP operation procedures manual, or an amendment to an approved RNP operation procedures manual, must submit the proposed manual or amendment to the Director.
- (d) The Director may approve a RNP operation procedures manual and any amendment to a RNP operation procedures manual.
- (e) Each RNP operation procedures manual must contain—
- (1) the name of the operator; and
 - (2) the registration, make, and model of the aircraft to which it applies; and
 - (3) the type, manufacturer, and model of the aircraft navigation system to which it applies; and
 - (4) a maintenance programme including procedures for the—
 - (i) test and inspection of each instrument and item of equipment required by rule 91.519 for RNP operations at intervals that ensure the RNP performance required for the particular operation is maintained; and
 - (ii) recording in the maintenance records the date, departure aerodrome, destination airport, and reasons for each RNP operation discontinued because of instrument or equipment malfunction; and
 - (5) procedures and instructions related to—
 - (i) the mitigation of large navigational errors due to equipment malfunction or operational error; and
 - (ii) in-flight drills that include cross checking procedures to identify navigation errors in sufficient time to prevent inadvertent deviation from ATC cleared routes; and
 - (iii) updating the navigation system to ensure that the required RNP performance is maintained during operations in RNP designated airspace; and
 - (iv) the maximum permissible deviations of the RNP system within the RNP designated airspace; and
 - (v) the calculation of time limits to meet RNP criteria; and
 - (vi) instrument and equipment failure warning systems; and
 - (vii) system failure; and
 - (viii) system monitoring and the collection of reliability and performance data; and
 - (ix) other procedures, instructions, and limitations that may be found necessary by the Director.
- (f) The procedures manual required by paragraphs (a), (b), (c), and (e) may be incorporated in the operations procedures required of the holder of an air operator certificate issued under the Act and Part 119.
- (g) Each pilot-in-command must—
- (1) unless authorised by ATC, ensure that 2 independent LRNS are serviceable and accurate—
 - (i) 30 minutes before entry to RNP designated airspace; and
 - (ii) on entry to RNP designated airspace; and

- (2) when operating in, or within 30 minutes before entry of, RNP designated airspace—
- (i) notify ATC whenever the aircraft cannot meet RNP criteria; and
 - (ii) notify ATC whenever the aircraft is operating with a single LRNS; and
 - (iii) if unable to communicate with ATC, proceed in accordance with the contingency procedures in ICAO Regional Supplementary Procedures, Document 7030.

91.247 Use of SSR transponder and altitude reporting equipment

(a) Except as provided in paragraph (e), a pilot-in-command of an aircraft operating in transponder-mandatory airspace designated under Part 71 must, unless otherwise authorised or instructed by ATC—

- (1) operate the transponder—
 - (i) in Mode A and Mode C; or
 - (ii) in Mode S if the aircraft is equipped with Mode S equipment and allocated a unique Mode S code referred to in paragraph (b); and
- (2) except if paragraph (3) applies or if operating Mode S equipment, set the transponder SSR code—
 - (i) to the code assigned by ATC for the flight; or
 - (ii) if not assigned a code by ATC, in accordance with Table 2; and
- (3) in the event of an in-flight emergency, loss of radio communications, or an act of unlawful interference, set the transponder to the appropriate code in accordance with Table 3.

(b) A person must not operate an aircraft with Mode S transponder equipment installed unless the State of registry has assigned the aircraft a unique Mode S address code.

(c) A pilot-in-command of an aircraft intending to operate the aircraft without an operable transponder in transponder mandatory airspace that is within controlled airspace must obtain specific authorisation from the ATC unit having jurisdiction over the relevant airspace as part of the ATC clearance to enter that airspace.

(d) A pilot-in-command of an aircraft operating in transponder mandatory airspace must immediately advise the ATC unit having jurisdiction over the relevant airspace of any failure or partial failure of the transponder equipment.

(e) Unless otherwise required by ATC, only 1 of the aircraft in a formation flight is required to operate a transponder in accordance with paragraph (a).

Table 2. Airspace SSR Codes

Flight rules	Type of aircraft operation	SSR Code
IFR	All	2000
VFR	Aeroplanes other than Defence aeroplanes	1200
VFR/IFR	Defence aircraft	6000

Table 3. Emergency SSR Codes

Occurrence	SSR Code
Unlawful interference	7500
Loss of radio communication	7600
In flight emergency when no code has been allocated by ATC	7700

91.249 Aircraft callsigns

(a) If required to communicate by radiotelephony under the Civil Aviation Rules, a pilot-in-command of a Mongolian registered aircraft must use 1 of the following radiotelephony callsigns—

- (1) the telephony designator of the aircraft operating agency as approved by the Director, followed by the flight identification; or
- (2) the telephony designator of the aircraft operating agency as approved by the Director followed by the last 3 letters of the aircraft registration marking; or
- (3) the name of the aircraft manufacturer, or the aircraft model, and the last 3 letters of the aircraft registration marking.

(b) Notwithstanding paragraph (a)(2), the pilot-in-command may, after establishing two-way communication with an appropriate ATS unit, use an abbreviated callsign consisting of the last 3 letters of the aircraft registration marking.

(c) The Director may only approve the callsigns prescribed in paragraphs (a)(1) and (2) for the use of—

- (1) the holder of an air operator certificate issued under Part 119 or Part 129 conducting—
 - (i) a regular air transport service; or
 - (ii) a search and rescue flight; or
 - (iii) a medical transfer or medical emergency flight; and
- (2) aircraft being flown on a police operation that is authorised by the Police.

(d) An applicant for the approval of a telephony designator must submit to the Director in writing the name of the aircraft operating agency and a payment of the appropriate application fee prescribed by regulations made under the Act.

91.251 Time-in-service recorder operation

A person must not tamper with the operation of an automatic time-in-service recorder that is required to be installed in the aircraft in accordance with rule 91.509(b).

Subpart D — Visual Flight Rules**91.301 VFR meteorological minima**

(a) Except as provided in rule 91.303, and paragraphs (b) and (c), a pilot-in-command must not operate an aircraft under VFR—

- (1) when the flight visibility is less than that prescribed for the corresponding class of airspace in Table 4; or
- (2) at a distance from clouds that is less than that prescribed for the corresponding class of airspace in Table 4.

(b) Except as provided in rule 91.303, a pilot-in-command must not perform a take-off or landing in an aircraft, or fly in the vicinity of an aerodrome, under VFR when the flight visibility, or the cloud ceiling, is less than—

- (1) at aerodromes within a control zone, that prescribed in Table 5; and
- (2) at aerodromes in uncontrolled airspace, that prescribed in Table 6.

(c) A pilot-in-command of—

- (1) a helicopter may operate in Class G airspace with a flight visibility of less than 5 km if manoeuvred at a speed that gives adequate opportunity to observe other traffic or any obstructions in order to avoid collisions; and
- (2) an aircraft performing agricultural aircraft operations, may operate in Class G airspace with a flight visibility of less than 5 km but not less than 1500 m; and
- (3) an aircraft performing flight instruction may operate within a designated low flying zone prescribed under Part 71 with a flight visibility of less than 5 km but not less than 1500 m

Table 4. Airspace VFR meteorological minima

Class of airspace		Distance from cloud	Flight visibility
B		Clear of cloud	
C, D, and E		2 km horizontally 1000 feet (300m) vertically outside a control zone 500 feet (150m) vertically within a control zone	8 km at or above 10 000 feet (3000m) AMSL
F and G	Above 3000 feet (900m)AMSL or 1000 feet (300m) above terrain whichever is the higher	2 km horizontally 1000 feet (300m) vertically	5 km below 10 000 feet (3000m) AMSL
	At or below 3000 feet (900m)AMSL or 1000 feet (300m) above the terrain whichever is the higher	Clear of cloud and in sight of the surface	5 km

Table 5. VFR minima at aerodromes within a control zone

		Ceiling	Flight visibility
All aircraft	Day and Night	1500 feet	5 km

Table 6. VFR minima at aerodromes in uncontrolled airspace.

		Ceiling	Flight visibility
All aircraft	Day	600 feet	1500 m
All aircraft	Night	1500 feet	8 km

91.303 Special VFR weather minima

A pilot-in-command of an aircraft may perform a VFR operation within a control zone in meteorological conditions below those prescribed in 91.301 if—

- (1) the ceiling and flight visibility is—
 - (i) at least 600 feet (180m) and at least 1500 m respectively; or
 - (ii) for helicopters, less than 600 feet (180m) and less than 1500 m respectively if the helicopter is operated at a speed that will give adequate opportunity to observe other traffic or any obstructions in order to avoid collisions; and
- (2) the aircraft is equipped with two-way radio capable of communicating with ATC on the appropriate frequency; and
- (3) the operation is conducted—
 - (i) in compliance with an ATC clearance and any ATC instructions; and
 - (ii) only during the day; and
 - (iii) clear of clouds.

91.305 Fuel requirements for flight under VFR

(a) A pilot-in-command of an aeroplane must not begin a flight under VFR unless, in the forecast weather conditions, the aeroplane has enough fuel to fly to the first point of intended landing at the planned normal cruising speed and to fly after that point of intended landing for at least—

- (1) a further 30 minutes during the day; or
- (2) a further 45 minutes at night; or
- (3) for an aeroplane that has a special category—limited airworthiness certificate or a special category—exhibition airworthiness certificate, the flying time specified for the VFR minimum fuel reserve in the operator statement required under rule 47.55(c).

(b) A pilot-in-command of a helicopter must not begin a flight under VFR unless, in the forecast weather conditions, the helicopter has enough fuel to fly to the first point of intended landing at the planned cruising speed, and to fly after that point of intended landing for at least —

- (1) a further 20 minutes; or
- (2) for flights of less than 20 minutes duration, for a further period equal to the anticipated flight time; or
- (3) for a helicopter that has a special category—limited airworthiness certificate or a special category—exhibition airworthiness certificate, the flying time specified for the VFR minimum fuel reserve in the operator statement required under rule 47.55(c).

91.307 VFR flight plan

(a) A pilot-in-command of an aircraft must submit a VFR flight plan to an appropriate ATS unit before starting any flight conducted under VFR if—

- (1) the pilot-in-command plans to proceed more than 50 nm (93km) from shore; or
- (2) the pilot-in-command requires an alerting service.

(b) In addition to the requirement in paragraph (a), a pilot-in-command of an aircraft may submit a VFR flight plan to an appropriate ATS unit for any other flight conducted under VFR.

(c) A VFR flight plan referred to in paragraphs (a) or (b) must include the following information:

- (1) the aircraft registration and callsign:
- (2) the type of aircraft to be used:
- (3) the route including, if practicable for each route segment, aerodromes of departure and intended landing, estimated elapsed times, and time on the ground at each intermediate aerodrome:
- (4) the SARTIME:
- (5) fuel endurance:
- (6) the total number of persons in the aircraft:
- (7) the name and telephone contact details of the pilot-in-command:
- (8) the name of the aircraft owner or operator:
- (9) any additional information that may assist search and rescue operations.

(d) If a VFR flight plan has been submitted to an ATS unit under paragraphs (a) or (b), the pilot-in-command must—

- (1) inform an appropriate ATS unit of any change to the details in the flight plan and of any change to the flight plan SARTIME before the expiry of that SARTIME; and
- (2) terminate the flight plan by advising an appropriate ATS unit before the flight plan SARTIME.

91.309 Position reports

Each pilot-in-command of an aircraft on a VFR flight shall, when operating in controlled airspace, report the position of the aircraft to ATC at the times or reporting points required by ATC.

91.311 Minimum heights for VFR flights

- (a) A pilot-in-command of an aircraft must not operate the aircraft under VFR—
 - (1) over any congested area of a city, town, or settlement, or over any open air assembly of persons at a height of less than 1000 feet (300m) above the surface or any obstacle that is within a horizontal radius of 600 metres from the point immediately below the aircraft; or
 - (2) over any other area—
 - (i) at a height of less than 500 feet (150m) above the surface; or
 - (ii) at a height of less than 500 feet (150m) above any obstacle, person, vehicle, vessel, or structure that is within a horizontal radius of 150 metres from the point immediately below the aircraft; and
 - (3) for any operation, at a height less than that required to execute an emergency landing in the event of engine failure without hazard to persons or property on the surface.
- (b) Paragraph (a) does not apply to a pilot-in-command of an aircraft—
 - (1) conducting a take-off or landing; or
 - (2) conducting a balked landing or discontinued approach; or
 - (3) taxiing.
- (c) Paragraph (a)(2) does not apply to a pilot-in-command of an aircraft if the bona fide purpose of the flight requires the aircraft to be flown at a height lower than that prescribed in paragraph (a)(2), but only if—
 - (1) the flight is performed without hazard to persons or property on the surface; and
 - (2) only persons performing an essential function associated with the flight are carried on the aircraft; and
 - (3) the aircraft is not flown at a height lower than that required for the purpose of the flight; and
 - (4) the horizontal distance that the aircraft is flown from any obstacle, person, vessel, vehicle, or structure is not less than that necessary for the purpose of the flight, except that in the case of an aeroplane, the aeroplane remains outside a horizontal radius of 150 metres from any person, vessel, vehicle, or structure that is not associated with the operation.
- (d) Paragraph (a)(2) does not apply to a pilot-in-command—
 - (1) who is the holder of, or authorised by the holder of, a current instructor rating issued under Part 61 and who is conducting flight training or practice flights consisting of—

- (i) simulated engine failure after take-off commencing below 1000 feet (300m) above the surface; or
- (ii) simulated engine failure commencing above 1000 feet (300m) above the surface provided that descent below 500 feet (150m) above the surface is conducted within a low flying zone in accordance with 91.131; or
- (2) who is the holder of a current instrument rating issued under Part 61 and who is conducting IFR training, testing, or practice flights under VFR, but only if the pilot-in-command conducts the flight in accordance with 91.413, 91.423 and 91.425; or
- (3) operating an aircraft within a low flying zone in accordance with 91.131; or
- (4) operating an aircraft at an aviation event in accordance with 91.703.

91.313. VFR cruising altitude and flight level

(a) A pilot-in-command of an aircraft operating within the Mongolian FIR under VFR in level cruising flight at more than 3000 feet (1000m) AMSL or 1000 feet (300m) AGL (whichever is the higher) must, unless otherwise authorised by an ATC unit, maintain the following altitudes or flight levels:

- (1) when operating at or below transition altitude and—
 - (i) on a magnetic track of 360° clockwise to 179°, beginning from 1500m adding 600m up to transition altitude odd hundreds of altitude (1500m, 2100m etc); or
 - (ii) on a magnetic track of 180° clockwise to 359°, beginning from 1800m adding 600m up to transition altitude hundreds of altitude (1800m, 2400m etc); or
- (2) when operating at or above designated flight level, up to flight level 6000m and—
 - (i) on a magnetic track of 360° clockwise to 179°, beginning from designated transition level up to 5700m odd hundreds of altitude (2700m, 3300m etc); or
 - (ii) on a magnetic track of 180° clockwise to 359°, beginning from designated transition level up to 6000m even hundreds of altitude (3000m, 3600m etc).

(b) A pilot-in-command of an aircraft operating within the Mongolian FIR under VFR must not maintain level cruising flight at any level between designated transition altitude and designated transition level otherwise authorised by an ATC unit for flights in controlled airspace.

91.315 Operating in snow and ice conditions

No pilot-in-command of an aircraft shall perform a take-off under VFR in an aircraft that has snow, ice, or frost, adhering to the wings, stabilisers, or control surfaces.

Subpart E — Instrument Flight Rules

91.401 Minimum flight crew

A pilot-in-command shall not operate an aircraft under IFR without another pilot, unless—

- (1) the aircraft flight manual authorises operation of the aircraft with one pilot; and
- (2) the aircraft is equipped with communication equipment that can be operated by the pilot without releasing the aircraft flight controls.

91.403 Fuel requirements for flights under IFR

A pilot-in-command shall not operate an aircraft under IFR unless the aircraft carries sufficient fuel, taking into account weather reports and forecasts and weather conditions, to complete the flight to the aerodrome of intended landing and—

- (1) when an alternate aerodrome is not required—
 - (i) for non-turbine-powered aeroplanes, fly after that for 45 minutes at holding speed at a height of 1500 feet (450m) above the aerodrome; or
 - (ii) for turbine-powered aeroplanes and helicopters, fly after that for 30 minutes at holding speed at a height of 1500 feet (450m) above the aerodrome.
- (2) when an alternate is required by 91.405, fly from the aerodrome of intended landing to the alternate aerodrome and—
 - (i) for non-turbine-powered aeroplanes, fly after that for 45 minutes at holding speed at a height of 1500 feet (450m) above the aerodrome; or
 - (ii) for turbine-powered aeroplanes and helicopters, fly after that for 30 minutes at holding speed at a height of 1500 feet (450m) above the aerodrome.

91.405 IFR alternate aerodrome requirement

(a) A pilot-in-command of an aircraft operating under IFR must list at least 1 alternate aerodrome in the flight plan unless—

- (1) the aerodrome of intended landing has a standard instrument approach procedure published in the applicable AIP; and
- (2) at the time of submitting the flight plan, the meteorological forecasts indicate, for at least 1 hour before and 1 hour after the estimated time of arrival at the aerodrome of intended landing, that—
 - (i) the ceiling at the aerodrome will be at least 1000 feet (300m) above the minimum published in the applicable AIP for the instrument procedure likely to be used; and
 - (ii) visibility will be at least 5 km, or 2 km more than the minimum published in the applicable AIP, whichever is the greater.

(b) A pilot-in-command of an aircraft must not list any aerodrome as an alternate on the IFR flight plan under paragraph (a) unless the meteorological forecasts at the time of submitting the flight plan indicate that, at the estimated time of arrival at the alternate aerodrome, the ceiling and visibility at that aerodrome will be at or above the following meteorological minima—

- (1) if an instrument approach procedure with alternate minima has been published in the applicable AIP for the aerodrome, the specified alternate aerodrome minima for that instrument approach procedure; or
- (2) for a precision approach procedure, a ceiling of 600 feet (180m), or 200 feet (60m) above DA/DH, whichever is the higher, and a visibility of 3000 metres, or 1000 metres more than the prescribed minimum, whichever is the greater; or
- (3) for a non-precision approach procedure, a ceiling of 800 feet (240m), or 200 feet (60m) above MDA/MDH, whichever is the higher, and a visibility of 4000 metres, or 1500 metres more than the prescribed minimum, whichever is the greater; or
- (4) if an instrument approach procedure has not been published in the applicable AIP for the alternate aerodrome, the ceiling and visibility minima prescribed under Part 91 Subpart D for an air operation performed under VFR for descent below the minimum altitude for IFR flight prescribed under rule 91.423.

(c) A pilot-in-command of an aircraft must not list any aerodrome as an alternate aerodrome in the IFR flight plan under paragraph (a) unless that alternate aerodrome is equipped with a secondary electric power supply for—

- (1) the ground based electronic navigation aids necessary for the instrument approach procedure to be used; and
- (2) aerodrome lighting for night operations.

91.407 IFR flight plan

(a) A pilot-in-command of an aircraft must—

- (1) submit a flight plan to an appropriate ATS unit prior to any flight under IFR; and
- (2) unless otherwise authorised by ATS, submit the flight plan at least 30 minutes prior to the beginning of the flight; and
- (3) unless otherwise authorised by ATS, include the following information in the flight plan—
 - (i) the identification of the aircraft to be used; and
 - (ii) the type of aircraft to be used, and its wake turbulence category; and
 - (iii) the radio communications equipment, and the navigation and approach aid equipment in the aircraft to be used; and
 - (iv) the departure aerodrome and time of departure; and
 - (v) the cruising speed, altitude, and route; and
 - (vi) the aerodrome of destination, total EET, and any alternate aerodrome required by 91.405; and
 - (vii) any additional information required for ATS purposes; and
 - (viii) the fuel endurance; and
 - (ix) total number of persons carried in the aircraft; and
 - (x) emergency and survival equipment carried in the aircraft; and
- (4) advise the appropriate ATS unit, as soon as possible, of any delay exceeding 30 minutes in beginning the flight or departing from any aerodrome of intended landing; and
- (5) terminate the flight plan as soon as practicable on completion of any flight at an aerodrome without ATS.

(b) For the purpose of this rule, aircraft wake turbulence categories are defined in ICAO Doc 8643 as amended.

91.409 Adherence to flight plan

(a) A pilot-in-command of an aircraft must, when an IFR flight plan has been submitted, adhere to that flight plan or the applicable portion of the flight plan, unless—

- (1) a request for change has been made and clearance obtained from an appropriate ATC unit; or
- (2) an emergency situation arises which necessitates immediate action to deviate from the flight plan.

(b) A pilot-in-command of an aircraft operating under IFR must, where practicable—

- (1) when on a route published in the applicable AIP, operate along the defined centre line of the route; or

- (2) when on any other route, operate directly between the navigation facilities and points defining the route; or
 - (3) when on an area navigation route or parallel offset route, operate along the centreline of the route specified by ATS.
- (c) If a deviation from a flight plan is made under paragraph (a)(2), the pilot-in-command must notify an appropriate ATS unit as soon as practicable.

91.411 Inadvertent change to flight plan

Each pilot-in-command of an aircraft operating under IFR, shall in the event of an inadvertent departure from the current flight plan—

- (1) advise an appropriate ATS unit of—
 - (i) any deviation from track; and
 - (ii) any variation of 5% or more of the true airspeed or any variation of ± 0.01 or more of the Mach number given in the flight plan; and
 - (iii) a revised ETA when the estimated ETA to the next reporting point notified to the ATS unit is found to be in error by more than two minutes; and
- (2) regain track as soon as practicable.

91.413 Take-off and landing under IFR

(a) Instrument approaches to aerodromes. When an instrument approach procedure to an aerodrome is necessary, a pilot-in-command of an aircraft operating under IFR must use a standard instrument approach procedure for the aerodrome published in the applicable AIP.

(b) **Authorised DA, DH, or MDA.** When the instrument approach procedure required by paragraph (a) provides for and requires the use of a DA, DH, or MDA, a pilot-in-command must use the DA, DH, or MDA that is the highest of the following—

- (1) the DA, DH, or MDA prescribed by the instrument approach procedure; or
- (2) the DA, DH, or MDA prescribed for the pilot-in-command; or
- (3) the DA, DH, or MDA for which the aircraft is equipped.

(c) **Operation below DA, DH, or MDA.** Where a DA, DH, or MDA is applicable, a pilot-in-command must not operate an aircraft at any below the MDA, or continue an instrument approach procedure below the DA or DH prescribed in paragraph (b), unless—

- (1) the aircraft is continuously in a position from which a descent to a landing on the intended runway can be made at a normal rate of descent using normal manoeuvres that allows touchdown to occur within the touchdown zone of the runway of intended landing; and
- (2) the flight visibility is not less than the visibility published in the applicable AIP for the instrument approach procedure being used; and
- (3) except for a Category II or Category III precision approach procedure published in the applicable AIP for the aerodrome that includes any necessary visual reference requirements, at least one of the following visual references for the intended runway is distinctly visible and identifiable to the pilot—
 - (i) the approach lighting system; or
 - (ii) the threshold markings; or
 - (iii) the threshold lights; or
 - (iv) the runway-end identification lights; or

- (v) the visual approach slope indicator; or
- (vi) the touchdown zone or touchdown zone markings; or
- (vii) the touchdown zone lights; or
- (viii) the runway or runway markings; or
- (ix) the runway lights.

(d) **Landing.** A pilot-in-command must not land an aircraft when the flight visibility is less than the visibility published in the applicable AIP for the instrument approach procedure used.

(e) **Missed approach procedures.** A pilot-in-command must immediately execute the missed approach procedure published in the applicable AIP if—

- (1) the requirements of paragraph (c) are not met at either of the following times:
 - (i) when the aircraft is being operated below MDA; or
 - (ii) upon arrival at the missed approach point, including a DA or DH where a DA or DH is specified and its use is required, and any time after that until touchdown; or
- (2) an identifiable part of the aerodrome is not distinctly visible to the pilot during a circling manoeuvre at or above MDA, unless the inability to see an identifiable part of the aerodrome results only from normal manoeuvring of the aircraft during approach.

(f) **Take-off Minima.** Except as provided in paragraph (g), a pilot-in-command of an aircraft must not take off from an aerodrome under IFR unless weather conditions are—

- (1) at or above the weather minima for IFR take-off published in the applicable AIP for the aerodrome; or
- (2) if weather minima for IFR take-off are not published in the applicable AIP for a particular aerodrome, a ceiling of at least 300 feet (90m) and more than 1500 m visibility.

(g) **Reduced Take-off Minima.** A pilot-in-command of an aircraft may take off under IFR at an aerodrome at a take-off minima of zero cloud ceiling and visibility at or above 800 m if—

- (1) the runway to be used has centre-line marking or centre-line lighting; and
- (2) the take-off weather visibility is confirmed by the pilot-in-command by observing the runway centre-line marking or centre-line lighting; and
- (3) reduced take-off minima on the runway to be used are published in the applicable AIP; and
- (4) any obstacles in the take-off flight path are taken into account; and
- (5) if the aircraft is a 2 engine propeller-driven aeroplane, the aircraft is equipped with an operative auto-feather or auto-coarse system.

91.415 Category II and III precision approach procedures

(a) A person must not operate an aircraft performing a Category II or III precision approach procedure unless—

- (1) each flight crew member has adequate knowledge of, and familiarity with, the aircraft and the procedures to be used; and
- (2) the instrument panel in front of the pilot who is controlling the aircraft has appropriate instrumentation for the type of flight-control guidance system that is being used; and
- (3) the RVR information for the runway in use is provided to the pilot-in-command.

(b) Except as otherwise authorised by the Director, a person must not operate an aircraft performing a Category II or III precision approach procedure unless the ground component required for the operation, and the related airborne equipment, is installed and operating.

(c) For the purpose of paragraph (d), when the precision approach procedure being used provides for and requires the use of a DH, the authorised DH must be the highest of the following—

- (1) the DH prescribed by the instrument approach procedure; or
- (2) the DH prescribed for the pilot-in-command; or
- (3) the DH for which the aircraft is equipped.

(d) Except as otherwise authorised by the Director, a pilot of an aircraft performing a Category II or III precision approach procedure that provides for and requires the use of a DH must not continue the approach below the authorised DH unless the following conditions are met—

- (1) the aircraft is in a position from which a descent to a landing on the intended runway can be made at a normal rate of descent using normal manoeuvres, and that descent rate allows touchdown to occur within the touchdown zone of the runway of intended landing; and
- (2) at least one of the following visual references for the intended runway is distinctly visible and identifiable:
 - (i) the runway threshold;
 - (ii) the runway threshold markings;
 - (iii) the runway threshold lights;
 - (iv) the runway touchdown zone or touchdown zone markings;
 - (v) the runway touchdown zone lights.

(e) Except as otherwise authorised by the Director, a pilot of an aircraft performing a Category II or III precision approach procedure must immediately execute a missed approach procedure whenever, prior to touchdown, the requirements of paragraph (d) are not met.

(f) A pilot of an aircraft performing a Category III precision approach procedure without a DH must not land the aircraft except in accordance with the provisions of an authorisation issued by the Director.

91.417 Category II and III precision approach procedure manual

(a) No person shall perform a Category II or III precision approach procedure in a Mongolian registered aircraft unless—

- (1) there is available in the aircraft—
 - (i) for Category II precision approach procedures, a current Category II precision approach procedure manual approved in accordance with 91.419 for that aircraft; or
 - (ii) for Category III precision approach procedures, a current Category III precision approach procedure manual approved in accordance with 91.419 for that aircraft; and
- (2) the Category II or III precision approach procedure is performed in accordance with the procedures, instructions, and limitations in the approved manual; and

- (3) the instruments and equipment listed in the approved manual that are required for a particular Category II or III precision approach procedure have been inspected and maintained in accordance with the maintenance programme in that manual.
- (b) Each operator of an aircraft performing a Category II or III precision approach procedure shall keep a current copy of the approved manual at its principal base of operation and shall make it available for inspection upon request by the Director.
- (c) The procedures manual required by paragraphs (a) and (b) may be incorporated in the operations procedures required of the holder of an air operator certificate issued under Part 119.

91.419 Approval of category II and III precision approach procedure manual

- (a) Each applicant for the approval of a Category II or III precision approach procedure manual, or an amendment to an approved Category II or III precision approach procedure manual, shall submit the proposed manual or amendment to the Director.
- (b) If the applicant requests an evaluation programme that requires the demonstration of a Category II or III precision approach procedure, the application shall include the following—
- (1) the location of the aircraft and the place where any demonstration is to be conducted; and
 - (2) the date any demonstration is to commence.
- (c) Each Category II or III precision approach procedure manual shall contain—
- (1) the registration, make, and model of the aircraft to which it applies; and
 - (2) a maintenance programme including procedures for the—
 - (i) test and inspection of each instrument and item of equipment required for Category II or III precision approach procedures at 3 month intervals; and
 - (ii) bench testing of each instrument and item of equipment required for Category II or III precision approach procedures at 12 month intervals; and
 - (iii) test and inspection of each static pressure system in accordance with Part 43 at 12 month intervals; and
 - (iv) recording in the maintenance records the date, airport, and reasons for each discontinued Category II or III precision approach procedures because of instrument or equipment malfunction; and
 - (3) the procedures and instructions related to—
 - (i) the recognition of decision height; and
 - (ii) the use of runway visual range information; and
 - (iii) approach monitoring; and
 - (iv) the maximum permissible deviations of the basic ILS indicator within the decision region; and
 - (v) a missed approach; and
 - (vi) the use of airborne low approach equipment; and
 - (vii) the minimum altitude for the use of the autopilot; and
 - (viii) instrument and equipment failure warning systems; and
 - (ix) instrument failure; and
 - (x) other procedures, instructions, and limitations that may be found necessary by the Director.

(d) Notwithstanding paragraph (c)(2)(i), a functional flight test may replace each alternate inspection in which case the maintenance programme shall include procedures for the completion and recording of this flight test.

91.421 Operating in icing conditions

(a) Except as provided in paragraph (b), a pilot-in-command operating an aircraft under IFR shall not—

- (1) perform a take-off in an aircraft that has—
 - (i) snow, ice, or frost adhering to any propeller, windscreen, or powerplant installation, or to an airspeed, altimeter, rate of climb, or flight attitude instrument system; or
 - (ii) snow, ice, or frost adhering to the wings, stabilisers, or control surfaces; and
- (2) fly an aircraft into known or forecast icing conditions unless the aircraft is certificated with ice protection equipment for flight in the type of known icing conditions.

(b) A pilot-in-command may perform a take-off in an aircraft that has snow, ice, or frost, adhering to the aircraft if the take-off is performed in accordance with the aircraft flight manual, or instructions and data provided by the aircraft manufacturer, for take-off in such conditions.

(c) If weather reports and briefing information immediately prior to the flight indicate to the pilot-in-command that the forecast icing conditions that would otherwise prohibit the flight will not be encountered during the flight because of changed weather conditions, the restrictions in paragraph (a)(2) based on forecast conditions shall not apply.

91.423 Minimum altitudes for IFR flights

Except when necessary for take-off or landing, a pilot-in-command must not operate an aircraft under IFR below—

- (1) the applicable minimum altitudes published in the applicable AIP; or
- (2) if an applicable minimum altitude is not published in the applicable AIP—
 - (i) for operations over a mountainous zone designated under Part 71 or applicable AIP, a height of 2000 feet (600m) above the highest obstacle within a horizontal radius of 5 nm (9km) from the position of the aircraft; or
 - (ii) a height of 1000 feet (300m) above the highest obstacle within a horizontal radius of 5 nm (9km) from the position of the aircraft.

91.425 IFR cruising altitude or flight level

(a) A pilot-in-command of an aircraft within the Mongolian FIR operating under IFR in level cruising flight must, unless otherwise authorised by an ATC unit for flights in controlled airspace, maintain the following altitude or flight levels:

- (1) when operating at or below transition altitude and—
 - (i) on a magnetic track of 360° clockwise to 179°, beginning from 900m adding 600m up to transition altitude odd hundreds of altitude (1500m, 2100m etc); or
 - (ii) on a magnetic track of 180° clockwise to 359°, beginning from 1800m adding 600m up to transition altitude hundreds of altitude (1800m, 2400m etc); or
- (2) when operating at or above designated flight level up to and including 12500m (flight level 410) and—

- (i) on a magnetic track of 360° clockwise to 179°, odd hundreds of altitude with the increments of 600m (2700m, 3300m etc); or
 - (ii) on a magnetic track of 180° clockwise to 359°, even hundreds of altitude with the increments of 600m (3000m, 3600m etc); or
- (3) when operating above 12500m (flight level 410) and—
- (i) on a magnetic track of 360° clockwise to 179°, any odd flight level, at 1200m (4000 foot) intervals beginning at and including flight level 450; or
 - (ii) on a magnetic track of 090° clockwise to 269°, any odd flight level at 4000 foot intervals beginning at and including flight level 430.
- (b) Except as instructed by ATC, a pilot-in-command of an aircraft within the Mongolian FIR operating under IFR must not maintain level cruising flight at any level between transition altitude and transition level.
- (c) A pilot-in-command of an aircraft within the Mongolian FIR operating under IFR outside controlled airspace may maintain level cruising flight between transition altitude and transition level if the pilot-in-command—
- (1) is unable to operate the aircraft in level cruising flight at or transition altitude or at or above transition level; and
 - (2) has established that there is no conflict with other aircraft at the altitude to be flown; and
 - (3) has given to the relevant ATS unit prior notification of the altitude to be flown.

91.427 IFR radio communications

- (a) Each pilot-in-command of an aircraft operating under IFR shall, unless otherwise authorised by ATC—
- (1) maintain a continuous listening watch on the appropriate frequency; and
 - (2) report as soon as possible to an appropriate ATS unit—
 - (i) the time and altitude of passing each designated reporting point, or the reporting points or the times specified by ATC; and
 - (ii) any other information relating to the safety of the flight.
- (b) Notwithstanding paragraph (a)(2), a pilot-in-command of an aircraft operating under IFR shall, while the aircraft is under radar control, report passing those reporting points specifically requested by ATC.

91.429 IFR operations - radio communications failure

- (a) Unless otherwise authorised by ATC, a pilot-in-command of an aircraft that has radio communications failure when operating under IFR in VMC, or if VMC are encountered after the failure, must continue the flight under VFR and land as soon as practicable at the nearest suitable aerodrome.
- (b) Unless otherwise authorised by ATC a pilot-in-command of an aircraft, that has radio communication failure when operating under IFR in IMC or, that is operating in VMC where the maintenance of such conditions is uncertain, must continue the flight in accordance with the flight plan, and;
- (1) if the communication failure occurs during departure, maintain the last assigned level to the point specified then continue the flight in accordance with the flight plan;

- (2) if the communication failure occurs during departure in the course of ATC radar vectoring, maintain the last assigned vector for 2 minutes while maintaining terrain clearance, then continue the flight in accordance with the flight plan;
- (3) if the communication failure occurs during the en route phase of the flight—
 - (i) track to the destination aid or fix specified by ATC or, if not specified, to the aid or fix for the anticipated instrument approach procedure, at the last assigned level; and
 - (ii) if necessary at or after the estimated time of arrival or expected approach time, descend in the holding pattern then commence the instrument approach procedure;
- (4) if the communication failure occurs on initial approach and the aircraft is not cleared for the approach by ATC, continue the procedure, if necessary, descending in the holding pattern to the last assigned altitude, maintaining that altitude until established on final approach then continue the instrument approach procedure;
- (5) if the communication failure occurs while the aircraft is operated under ATC radar vectoring during initial or intermediate approach, maintain the last assigned altitude until the aircraft is established on final approach then continue the instrument approach procedure;
- (6) if the communication failure occurs while the aircraft is being operated in a holding pattern and the weather is below instrument approach minima or the aerodrome is closed for any reason—
 - (i) continue in the holding pattern until the divert time notified to ATC; and
 - (ii) fly to the alternate aerodrome specified in the flight plan; and
 - (iii) conduct an instrument approach procedure to land at that aerodrome;
- (7) if the communication failure occurs during the operation of the aircraft in a missed approach procedure, conduct further instrument approaches up to a period of 30 minutes past expected approach time or estimated time of arrival, whichever is the later; and if the aircraft is unable to land within that 30 minute period, proceed to an alternate aerodrome specified in the flight plan and conduct an instrument approach procedure to that aerodrome.

91.431 Notification of facility malfunctions

- (a) Each pilot-in-command of an aircraft operating under IFR shall notify ATS as soon as practicable after a malfunction of any aeronautical telecommunication facility during flight.
- (b) The notification required by paragraph (a), shall include the—
 - (1) aircraft type; and
 - (2) aircraft registration and, if applicable, the flight number; and
 - (3) name of pilot-in-command; and
 - (4) name of the operator; and
 - (5) aircraft position and altitude; and
 - (6) phase of flight; and
 - (7) facility affected; and
 - (8) brief details of the malfunction; and
 - (9) effect on the flight.

Subpart F — Instrument and Equipment Requirements

91.501 General requirements

A person must not operate an aircraft unless—

- (1) the aircraft is equipped with the type and number of instruments and equipment required by this Subpart; and
- (2) the instruments and equipment installed in the aircraft comply with—
 - (i) the applicable specifications and airworthiness design standards listed in the following:
 - (A) Appendix A to this Part:
 - (B) Appendix C to Part 21:
 - (C) Part 26:
 - (D) for an aircraft that has a special category airworthiness certificate, the aircraft manufacturer's design specifications; or
 - (ii) an alternative specification and design standard—
 - (A) approved by the Director; or
 - (B) for an aircraft that has a special category airworthiness certificate, that is acceptable to the Director following a flight evaluation; and
- (3) the instruments and equipment installed in the aircraft have been installed in accordance with the aircraft manufacturer's instructions or other equivalent instructions acceptable to the Director; and
- (4) except as provided in rule 91.537, the instruments and equipment installed in the aircraft are in an operable condition.

91.503 Location of instruments and equipment

Each operator shall ensure that—

- (1) any instruments and equipment operated or used by one pilot can be readily seen and operated from that pilot's normally seated position; and
- (2) any single instrument or item of equipment operated or used by two pilots, is installed so that it can be readily seen and operated from each pilot's normally seated position.

91.505 Seating and restraints

(a) Except as provided in paragraph (b), each aircraft, other than a balloon, must be equipped with a—

- (1) seat or berth for each person on board; and
- (2) safety belt for each seat and restraining belts for each berth; and
- (3) shoulder harness for—
 - (i) each seat of an aircraft certificated for aerobatic flight; and
 - (ii) each crew member seat of an aircraft having a certificated seating capacity of 10 passenger seats or more; and
- (4) shoulder harness or a single diagonal shoulder belt for—
 - (i) each flight crew member seat of a helicopter; and
 - (ii) each flight crew member seat of an aeroplane engaged in training; and

- (iii) each crew member seat of an aeroplane when that aeroplane is operated in accordance with 91.311(c).

(b) Notwithstanding paragraphs (a)(1) and (2), a seat, berth, safety belt, or restraining belt is not required for—

- (1) any child being carried in accordance with 91.207(d)(1); and
- (2) any passenger engaged in parachute operations.

91.507 Passenger information signs

Each aircraft, except a balloon, having a certificated seating capacity of 10 passenger seats or more in passenger compartments separated from direct communication from the flight crew compartment shall be equipped with signs operated by the crew that are visible to passengers and flight attendants to notify them when—

- (1) smoking is prohibited; and
- (2) when safety belts must be fastened.

91.509 Minimum instruments and equipment

(a) A powered aircraft with an airworthiness certificate, except a powered glider, must be equipped with a means of—

- (1) indicating airspeed; and
- (2) indicating Mach number, if the speed limitation specified in the aircraft flight manual is expressed in terms of Mach number; and
- (3) indicating altitude in feet; and
- (4) indicating magnetic heading; and
- (5) indicating fuel tank contents, other than auxiliary fuel tank contents; and
- (6) indicating engine revolutions of each engine; and
- (7) indicating oil pressure of each engine using a pressure lubricating system; and
- (8) indicating coolant temperature of each liquid-cooled engine; and
- (9) indicating oil temperature of each engine rated at over 250 brake horsepower using a pressure lubricating system; and
- (10) indicating manifold pressure of each supercharged or turbocharged piston engine, and each piston engine fitted with a constant speed propeller; and
- (11) indicating cylinder head temperature of each air-cooled piston engine rated at over 250 brake horsepower; and
- (12) indicating flap position, if flaps are fitted, unless the position of the flaps can be determined visually by the flight crew member; and
- (13) indicating landing gear position, if the aircraft has retractable undercarriage; and
- (14) indicating the correct functioning of electrical power generating equipment; and
- (15) indicating the presence of carbon monoxide in the cabin if the aircraft is fitted with an exhaust manifold cabin heater or a combustion cabin heater.

(b) Subject to paragraph (c), the following Mongolian registered aircraft issued with an airworthiness certificate must be equipped with a means of automatically recording and accumulating the time-in-service for the aircraft:

- (1) a helicopter that is used for agricultural aircraft operations conducted in accordance with Part 137:

- (2) a helicopter that is used for air operations conducted in accordance with Part 135;
 - (3) a helicopter, except a helicopter that has a special category— experimental airworthiness certificate or a special category— amateur-built airworthiness certificate, that is used for any other type of operation;
 - (4) an aeroplane that is used for agricultural aircraft operations conducted in accordance with Part 137.
- (c) Paragraph (b) comes into force on a date to be appointed by the Minister by notice in the official web site at: www.mcaa.gov.mn; and 1 or more notices may be made bringing different provisions of paragraph (b) into force on different dates.
- (d) An aircraft equipped with a lockable door leading to any compartment normally accessible to passengers must be equipped with a means for a crew member to unlock the door.

91.511 Night VFR instruments and equipment

- (a) A powered aircraft with an airworthiness certificate operated under VFR by night must be equipped in accordance with rule 91.509 and have—
- (1) except as provided in paragraph (b), a means of indicating rate of turn and slip; and
 - (2) position lights; and
 - (3) an anti-collision light system; and
 - (4) illumination for each required instrument or indicator.
- (b) An aircraft equipped with a third attitude instrument indicator that is usable through 360° of pitch and roll does not need to be equipped with a means of indicating rate of turn.

91.513 VFR communication equipment

- (a) Unless authorised by ATC to operate under VFR without radio communication, an aircraft operating under VFR in controlled airspace classified under Part 71 as Class B, C, D, or in Class E airspace at night, must be equipped with radio communications equipment that—
- (1) meets level 1 or 2 standards specified in Appendix A, A.9; and
 - (2) is capable of providing continuous two-way communications with an appropriate ATC unit.
- (b) An aircraft operating under VFR outside controlled airspace must be equipped with radio communications equipment that meets level 1 or 2 standards specified in Appendix A, A.9 if the equipment is to be used for communication with any ATS unit.

91.515 Communication and navigation equipment - VFR over water

An aircraft operating under VFR over water, at a distance that is more than 30 minutes flying time from the nearest shore, must be equipped with—

- (1) communication equipment that—
 - (i) meets level 1 or 2 standards specified in Appendix A, A.9; and
 - (ii) is capable of providing continuous two-way communications with an appropriate ATS unit or aeronautical telecommunications facility; and
- (2) navigation equipment that is capable of being used to navigate the aircraft in accordance with the flight plan.

91.517 IFR instruments and equipment

Each powered aircraft issued with an airworthiness certificate and operating under IFR, shall be equipped in accordance with 91.509 and 91.511 and have the means of indicating—

- (1) aircraft attitude, by gyroscopic or inertial means; and
- (2) magnetic heading, by gyroscopic or inertial means; and
- (3) that the power supply to any gyroscopic instruments is adequate; and
- (4) sensitive pressure altitude, in feet, adjustable for barometric pressure in hectoPascals or millibars; and
- (5) outside air temperature; and
- (6) time in hours, minutes, and seconds; and
- (7) airspeed in knots, with a means of preventing malfunctioning due to either condensation or icing; and
- (8) rate of climb and descent.

91.519 IFR communication and navigation equipment

- (a) An aircraft operating under IFR must be equipped with communication equipment that—
 - (1) meets level 1 standards specified in Appendix A, A.9; and
 - (2) is capable of providing continuous two-way communications with an appropriate ATS unit or aeronautical telecommunications facility.
- (b) An aircraft operating under IFR must be equipped with a navigation system that—
 - (1) meets level 1 standards specified in Appendix A, A.9; and
 - (2) will enable the aircraft to proceed in accordance with—
 - (i) the flight plan required under 91.407; and
 - (ii) the designated RNP airspace where applicable; and
 - (iii) the requirements of ATCAn aircraft and aircraft navigation system operating in accordance with RNP performance requirements must be approved by the Director for operation on the applicable RNP routes and in RNP designated airspace.
- (c) An aircraft operating in airspace with an MNPS designated under ICAO Doc 7030 must—
 - (1) be equipped with navigation equipment capable of continuously indicating to the flight crew adherence to or departure from track, in accordance with the MNPS, at any point along that track; and
 - (2) be approved by the Director for MNPS operations.
- (e) An aircraft operating in airspace where a RVSM of 1000 feet (300m)is applied by ATC above flight level 290 must be—
 - (1) approved by the Director for operation in the airspace concerned; and
 - (2) equipped with equipment capable of—
 - (i) indicating to the flight crew the flight level being flown; and
 - (ii) automatically maintaining a selected flight level; and
 - (iii) for aircraft first issued with a type certificate before 1 January 1997, providing an aural and visual alert to the flight crew when a deviation of 300 feet (90m) from the selected flight level occurs; and

- (iv) for aircraft first issued with a type certificate after 31 December 1996, providing an aural and visual alert to the flight crew when a deviation of 200 feet (60m) from the selected flight level occurs; and
 - (v) automatically reporting pressure altitude with the capability for switching to operate from either altitude measurement system referred to in paragraph (f).
- (f) The equipment required in paragraph (e)(2)(i) must consist of at least two altitude measurement systems.
- (g) In the event of the failure of any independent system for either communication or navigation purposes, an aircraft operating in RNP or MNPS airspace must have the equipment required by paragraphs (a), (b), and (d)(1) installed in such number as to ensure that the remaining equipment will enable the aircraft to continue the flight in compliance with paragraphs (a), (b), and (d).

91.521 Category II and III precision approach equipment

- (a) Each aircraft performing a Category II or III precision approach procedure shall be equipped in accordance with 91.509, 91.511, and 91.517, and have—
- (1) two localiser and glide slope receiving systems that—
 - (i) each provide a basic ILS display at each pilot station; and
 - (ii) have at least one localiser antenna and one glide slope antenna; and
 - (2) at least one ILS system required under paragraph (1) that is not affected by the use of the aircraft communication equipment; and
 - (3) a marker beacon receiver that provides distinctive aural and visual indications of the outer and middle markers; and
 - (4) two gyroscopic or inertial aircraft attitude indicators; and
 - (5) two gyroscopic or inertial magnetic heading indicators; and
 - (6) two airspeed indicators calibrated in knots with a means of preventing malfunctioning due to either condensation or icing; and
 - (7) two sensitive altimeters, calibrated in feet, each having a placarded correction for altimeter scale error and for the wheel height of the aircraft; and
 - (8) two rate of climb and descent indicators; and
 - (9) a flight control guidance system that consists of—
 - (i) an automatic approach coupler, with, at least, automatic steering in relation to an ILS localiser at one pilot station; or
 - (ii) a flight director system that shall display computed information as steering commands in relation to an ILS localiser, and on the same instrument, either computed information as pitch commands in relation to an ILS glide slope or basic ILS glide slope information; and
 - (10) for operation with a decision height below 150 feet (45m)—
 - (i) a marker beacon receiver providing aural and visual indications of the inner marker; or
 - (ii) a radio altimeter; and
 - (11) warning systems, for immediate detection by the pilot of system faults in—
 - (i) items required by subparagraphs (1), (4), (5), and (9); and
 - (ii) if installed for use in Category III precision approach procedures, the radio altimeter and autothrottle system; and

- (12) fully functioning dual controls; and
 - (13) an externally vented static pressure system with an alternate static pressure source; and
 - (14) a windshield wiper, or equivalent means of providing adequate cockpit visibility for a safe transition, by either pilot, to touchdown and rollout.
- (b) The number of instruments and equipment required under paragraphs (a)(4), (5), (6), (7), and (8) includes the instruments and equipment required for IFR operations under 91.517.

91.523 Emergency equipment

- (a) An aircraft with a certificated seating capacity of 10 passenger seats or more must be equipped with—
- (1) the number of first aid kits specified in Table 7, which must be distributed and readily accessible in each passenger compartment for the treatment of injuries likely to occur in flight or in minor accidents; and
 - (2) the number of hand-held fire extinguishers specified in Table 8, which must be readily accessible, and distributed in accordance with Table 8.
- (b) An aircraft with a certificated seating capacity of 20 passenger seats or more must be equipped with an axe that is readily accessible to the crew.
- (c) An aircraft with a certificated seating capacity of 61 passenger seats or more must be equipped with portable battery-powered megaphones—
- (1) readily accessible from the flight attendant seat for the crew members who are assigned to direct emergency evacuation; and
 - (2) distributed in accordance with Table 9.
- (d) Each item of equipment that is required under paragraphs (a)(2) and (c) must clearly indicate its method of operation.
- (e) Each compartment or container that contains an item of equipment that is required under paragraph (a), must be marked to indicate its contents.
- (f) Paragraph (c) does not apply when the aircraft is carrying cargo exclusively in any passenger compartment converted for the carriage of cargo.

Table 7: First aid kit

Certificated passenger seating capacity of—	Total number of kits
1 through 100	1
101 through 200	2

91.525 Flights over water

(a) An aircraft that is operated on a flight over water must be equipped with 1 life preserver for each person on board and stowed in a position that is readily accessible from the seat or berth occupied by the person if—

- (1) the aircraft is a single-engine aircraft and the flight distance to shore is more than gliding distance for the aircraft; or
- (2) the aircraft is a multi-engine aircraft that is unable to maintain a height of at least 1000 feet (300m) AMSL with 1 engine inoperative, and the flight distance to shore is more than gliding distance for the aircraft; or
- (3) the aircraft is a multi-engine aircraft that is capable of maintaining a height of at least 1000 feet (300m) AMSL with 1 engine inoperative and the flight distance to shore is more than 50 nm (93km).

(b) A single-engine aircraft, or multi-engine aircraft that is unable to maintain a height of at least 1000 feet (300m) AMSL with 1 engine inoperative, that is operated on a flight over water that extends to more than 100 nm (185km) from shore must be equipped with—

- (1) enough life-rafts with buoyancy and rated capacity to accommodate all the occupants of the aircraft; and
- (2) a survival locator light on each life-raft; and
- (3) a survival kit, appropriately equipped for the route to be flown, attached to each life-raft; and
- (4) at least 1 pyrotechnic signalling device on each life-raft; and
- (5) 1 ELT(S) or 1 EPIRB.

(c) A multi-engine aircraft that is capable of continuing flight with 1 or more engines inoperative that is operated on a flight over water that extends to more than 200 nm (370km) from shore must be equipped with the equipment specified in paragraph (b).

(d) An aircraft in excess of 5700 kg MCTOW that is operated on a flight over water that extends to more than 200 nm (370km) from shore must be equipped with—

- (1) the equipment specified in paragraph (b); and

- (2) an additional ELT(S) or EPIRB.
- (e) A manned balloon must be equipped with 1 life preserver for each person on board stowed in a position that is readily accessible from the position occupied by the person if—
- (1) the flight crosses or might cross the shore of any lake or sea; or
 - (2) the flight takes-off from or intends to land at a site where the takeoff or approach path is so disposed over water that in the event of a mishap there is a likelihood of a ditching; or
 - (3) the flight takes-off from a site that is located within 1 nm (1.8km) of water at the ordinary high water mark and the wind is offshore or is less than 5 knots onshore.
- (f) The life preservers, life-rafts, signalling devices, ELT(S), and EPIRB required under any of paragraphs (a) to (e) must be installed in conspicuously identified locations and must be easily accessible in the event of a ditching of the aircraft.

91.527 Aircraft operations on water

An aircraft operating on water must be equipped with—

- (1) one life preserver for each person on board, stowed in a position readily accessible from each seat or berth; and
- (2) for each aircraft in excess of 5700 kg MCTOW, one sea anchor.

91.529 Emergency locator transmitter

- (a) A person must not operate an aircraft without an ELT (AF) installed in the aircraft except as provided in paragraphs (b), (d), and (e), rule 121.353(b), and rule 129.109.
- (b) An aircraft may be operated without an ELT(AF) installed if—
- (1) the operation is to ferry the aircraft from the place where the operator takes possession of the aircraft to a place where an ELT(AF) is to be installed; and
 - (2) the aircraft does not carry any passenger.
- (c) Despite rule 91.501(4), an aircraft may be operated with an inoperative ELT (AF) if—
- (1) the operation is to ferry the aircraft from a place where repairs or replacement of the ELT cannot be made to a place where the repairs or replacement can be made; and
 - (2) the aircraft does not carry any passenger.
- (d) Despite rule 91.501(4) and paragraph (a), an aircraft may be operated without an operable ELT (AF) for a period of not more than 7 days if the aircraft is equipped with an ELT(S) or PLB that is accessible to any person on board the aircraft.
- (e) Paragraph (a) does not apply to the following aircraft:
- (1) an aircraft that is equipped with no more than 1 seat if the pilot is equipped with an ELT(S) or PLB:
 - (2) a glider or microlight aircraft if at least 1 person carried in the glider or microlight aircraft is equipped with an ELT(S) or PLB:
 - (3) a glider, or powered aircraft, including a microlight aircraft, that is equipped with no more than 2 seats, if the glider or powered aircraft is operated not more than 10 nm (18km) from the aerodrome from which the glider or powered aircraft took off:
 - (4) a manned free balloon.
- (f) A holder of a certificate of registration for a Mongolian registered aircraft that is equipped with an ELT(AF), or carries an ELT(S), EPIRB, or PLB that operates on 406 MHz must not operate the aircraft unless—

- (1) for an ELT(AF) or ELT(S), the ELT is coded with the International Telecommunication Union (ITU) country code for Mongolia, and any of the following:
 - (i) the ELT serial number;
 - (ii) the 24-bit aircraft address;
 - (iii) the ICAO aircraft operating agency designator and a serial number allocated by the operator;
 - (iv) the aircraft nationality and registration marks; and
 - (2) for an EPIRB or PLB, the EPIRB or PLB is coded with—
 - (i) the International Telecommunication Union (ITU) country code for Mongolia; and
 - (ii) a unique code to identify the EPIRB or PLB; and
 - (3) the holder of the certificate of registration has notified the Rescue Coordination Centre Mongolia of—
 - (i) the code, in accordance with paragraph (f)(1) or (f)(2), for each ELT, EPIRB, or PLB that is installed or carried in the aircraft; and
 - (ii) the name and emergency contact details of the aircraft operator.
- (g) A person must not operate a foreign aircraft in Mongolia that is equipped with or carries an ELT that operates on 406 MHz unless the ELT is coded with—
- (1) the International Telecommunication Union (ITU) country code of the State of registry; and
 - (2) any of the following:
 - (i) the ELT serial number;
 - (ii) the 24-bit aircraft address;
 - (iii) the ICAO aircraft operating agency designator and a serial number allocated by the operator;
 - (iv) the aircraft nationality and registration marks.

91.531 Oxygen indicators

Each aircraft operated at altitudes above 13 000 feet (3900m) AMSL, or for more than 30 minutes between 10 000 feet (3000m) up to and including 13 000 feet (3900m) AMSL, shall be equipped with a means of indicating—

- (1) to the flight crew—
 - (i) the amount of oxygen available in each source of supply and whether the oxygen is being delivered to the dispensing units; and
 - (ii) of a pressurised aircraft, by visual or aural warning when the cabin pressure altitude exceeds 10 000 feet (3000m) AMSL;
- (2) to each user of an individual dispensing unit, the amount of oxygen available and whether the oxygen is being delivered to the dispensing unit.

91.533 Supplemental oxygen for non-pressurised aircraft

(a) An aircraft with a non-pressurised cabin that is operated at altitudes above 10 000 feet (3000m) AMSL must—

- (1) if operating at altitudes up to and including 13 000 feet (3900m) AMSL be equipped with—

- (i) supplemental oxygen for continuous use by every crew member and 10% of passengers if the aircraft is operated above an altitude of 10 000 feet (3000m) AMSL for any period in excess of 30 minutes; and
 - (ii) therapeutic oxygen for continuous use by not less than 3% of the passengers; and
- (2) if operating at altitudes above 13 000 feet (3900m) AMSL and up to and including 25 000 feet (7500m) AMSL be equipped with—
- (i) supplemental oxygen for continuous use by every crew member and passenger; and
 - (ii) therapeutic oxygen for continuous use by not less than 1% of the passengers; and
 - (iii) portable oxygen equipment for each flight attendant that is readily accessible for immediate use and containing the greater of 120 litres of oxygen or the quantity of oxygen required for continuous use during the period that the cabin pressure altitude exceeds 10 000 feet (3000m).

(b) The requirements in paragraph (a) may be satisfied by substituting an equivalent quantity of supplemental oxygen for therapeutic oxygen or an equivalent quantity of therapeutic oxygen for supplemental oxygen.

91.535 Supplemental oxygen for pressurised aircraft

Flights above 10 000 ft (3000m) AMSL and up to 25 000 ft (7500m) AMSL

- (a) An aircraft with a pressurised cabin that is to be operated at altitudes above 10 000 feet (3000m) AMSL and up to and including 25 000 feet (7500m) AMSL must be equipped with—
- (1) an on-demand oxygen mask for each flight crew member, that is readily accessible to the flight crew member at his or her normally-seated position and capable of providing a continuous supply of supplemental oxygen for the period that the cabin pressure altitude exceeds 10 000 feet (3000m) AMSL if the cabin pressurisation system fails; and
 - (2) the following equipment that is readily accessible to each flight attendant at his or her normally-seated position:
 - (i) a passenger oxygen mask;
 - (ii) portable oxygen equipment that is readily accessible for immediate use and containing the greater of 120 litres of oxygen or the quantity of oxygen required for continuous use for the period that the cabin pressure altitude exceeds 10 000 feet (3000m) AMSL if the cabin pressurisation system fails; and
 - (3) sufficient spare oxygen masks, or portable oxygen equipment, distributed to provide immediate availability of oxygen to each crew member regardless of their location; and
 - (4) subject to paragraph (b), a minimum quantity of supplemental oxygen that must provide—
 - (i) 45 minutes supply for each flight crew member; and
 - (ii) 12 minutes supply for each flight attendant, and each passenger; and
 - (5) subject to paragraph (b), the greater of the quantity of supplemental or therapeutic oxygen that may be required by any one of the following:
 - (i) if the aircraft is capable of descending from its flight altitude to below 14 000 feet (4200m) AMSL within 4 minutes—a quantity to provide oxygen for 10% of

the passengers for any period that the cabin pressure altitude exceeds 10 000 feet (3000m) AMSL:

- (ii) if the aircraft cannot descend to below 14 000 feet (4200m) AMSL within 4 minutes—a quantity to provide oxygen for all the passengers for the period that the cabin pressure altitude exceeds 14 000 feet (4200m) AMSL:
- (iii) a quantity to provide oxygen for 10% of the passengers for a period of 30 minutes:
- (iv) a quantity to provide oxygen for continuous use by 1% of the passengers.

(b) The calculation of the quantity of oxygen that is required to meet the requirements under paragraphs (a)(4) and (a)(5) in the event of a cabin pressurisation system failure must take into account—

- (1) the time that is required for the aircraft to make an emergency descent and recover to level flight at a safe altitude; and
- (2) the time that is required for the aircraft to be flown at a pressure altitude above 10 000 feet (3000m) during any subsequent stage of the flight prior to landing.

Flights above 25 000 ft AMSL and up to 30 000 ft AMSL

(c) An aircraft with a pressurised cabin that is operated at altitudes above 25 000 feet (7500m) AMSL and up to and including 30 000 feet (9000m) AMSL must be equipped with the equipment required under paragraph (a) and—

- (1) a quick donning on-demand mask for each flight crew member that is readily accessible to the flight crew member at their normally seated position; and
- (2) oxygen masks capable of providing supplemental oxygen—
 - (i) to every passenger and flight attendant; and
 - (ii) in each washroom and each separate lavatory; and
- (3) therapeutic oxygen capable of providing not less than 15 minutes supply in addition to the oxygen required under paragraph (a)(5)(iii), for 10% of the passengers carried.

Flights above 30 000 ft (9000m) AMSL

(d) An aircraft with a pressurised cabin that is to be operated at altitudes above 30 000 feet (9000m) AMSL must be equipped with the equipment required under paragraphs (a) and (c) with the following additional requirements:

- (1) the total number of oxygen outlets and masks in the passenger compartments, including those in each washroom and lavatory, must be at least 10% greater than the number of passenger seats:
- (2) the extra oxygen units must be uniformly distributed throughout the aircraft:
- (3) the oxygen masks must be automatically presented to the passengers and flight attendants in the passenger compartment if the cabin pressure altitude exceeds 14 000 feet (4200m) AMSL:
- (4) the flight crew must be provided with a manual means of making the passenger masks available if the automatic system fails.

91.537 Inoperative instruments and equipment

(a) An aircraft with inoperative instruments or equipment may be operated if—

- (1) an MEL has been approved for the aircraft in accordance with rule 91.539; and
- (2) the aircraft is certified for release-to-service with the inoperative instruments or equipment in accordance with the requirements of rule 43.107; and

- (3) the aircraft is operated in accordance with every applicable condition and limitation contained in the MEL.
- (b) An aircraft that does not exceed 5700 kg MCTOW and does not have a MEL approved under rule 91.539 may be operated under this Part with inoperative instruments and equipment if—
- (1) the inoperative instruments and equipment are—
 - (i) not instruments and equipment prescribed for VFR day certification in the applicable airworthiness requirements under which the aircraft was type certificated; and
 - (ii) not required by this Subpart for specific operations; and
 - (iii) not required by an airworthiness directive to be in operable condition; and
 - (2) the aircraft is certified for release-to-service with the inoperative instruments or equipment in accordance with the requirements of rule 43.107.
- (c) An aircraft that does not meet the requirements of paragraphs (a) or (b) may be operated with inoperative instruments and equipment if a special flight permit has been issued in respect of the aircraft in accordance with Subpart I of Part 21.

91.539 Approval of minimum equipment list

- (a) An applicant for the approval of a MEL must complete form CAA 24091/01, and submit it to the Director together with a payment of the appropriate application fee prescribed by regulations made under the Act.
- (b) A MEL must contain—
- (1) the type and model of the aircraft to which it applies; and
 - (2) a list of instruments and equipment for the aircraft that may be partially or fully inoperative that—
 - (i) has been approved by the manufacturer of the aircraft; or
 - (ii) has been approved by the ICAO Contracting State that issued the type certificate for the aircraft; or
 - (iii) is acceptable to the Director on the grounds that the inoperative instruments and equipment do not affect the safe operation of the aircraft.
- (c) A MEL must not contain any instruments or equipment that are—
- (1) either specifically or otherwise required by the airworthiness requirements under which the aircraft is type certificated; or
 - (2) required by this subpart for specific operations; or
 - (3) required by an AD to be in operable condition.
- (d) The Director may specify operating conditions and limitations on the MEL that the Director considers necessary in the interests of aviation safety.

91.541 SSR transponder and altitude reporting equipment

- (a) Except as provided in 91.247(c) and (e), an aircraft operating in transponder mandatory airspace designated under Part 71 must be equipped with a SSR transponder having—
- (1) Mode 3/A 4096 code capability replying to Mode 3/A interrogations with the code specified by ATC; and
 - (2) Mode C capability that automatically replies to Mode C interrogations by transmitting pressure altitude information in 100 foot increments.

(b) Where an aircraft is equipped with Mode S transponder equipment, the transponder must be capable of replying to-

- (1) Mode 3/A interrogations with the code specified by ATC; and
- (2) intermode; and
- (3) Mode S interrogations.

91.543 Altitude alerting system or device - turbojet or turbofan

(a) Except as provided in paragraph (b), each turbojet or turbofan powered aeroplane shall be equipped with an altitude alerting system or device that—

- (1) alerts the pilot upon approaching a preselected altitude in either ascent or descent—
 - (i) by a sequence of both aural and visual signals in sufficient time to establish level flight at that preselected altitude; or
 - (ii) by a sequence of visual signals in sufficient time to establish level flight at that preselected altitude, and when deviating above or below that preselected altitude, by an aural signal; and
- (2) provides the required signals from sea level to the highest operating altitude approved for the aeroplane in which it was installed; and
- (3) enables use of preselected altitudes in increments that are commensurate with the altitudes at which the aeroplane can be operated; and
- (4) may be tested without special equipment to determine proper operation of the alerting signals; and
- (5) accepts barometric pressure settings if the system or device operates on barometric pressure.

(b) Paragraph (a) shall not apply—

- (1) to the operation of any aeroplane that has an airworthiness certificate issued in the restricted, or special category; or
- (2) to the operation of any aeroplane for the purposes of—
 - (i) ferrying a newly acquired aeroplane from the place where possession of it was taken to a place where the altitude alerting system or device is to be installed; or
 - (ii) conducting an airworthiness flight test of the aeroplane; or
 - (iii) ferrying an aeroplane to a place outside Mongolia for the purpose of registering it in a foreign country; or
 - (iv) conducting a sales demonstration of the operation of the; or
 - (v) training foreign flight crews in the operation of the aeroplane before ferrying to a place outside Mongolia for the purpose of registering it in a foreign country.

91.545 Assigned altitude indicator

(a) Except as provided in paragraph (c), an aeroplane operating under IFR that is not equipped with an altitude alerting system or device must be equipped with a means of indicating an altitude assigned by ATC.

(b) The means of indicating assigned altitude required by paragraph (a) must—

- (1) be located so that it may be readily adjusted for setting from each pilot station; and

- (2) display assigned altitude information that is clearly visible to every flight crew member whose duty involves altitude assignment monitoring; and
 - (3) enable use of preselected altitudes in increments that are commensurate with the altitudes at which the aeroplane can be operated.
- (c) An aeroplane that has a special category—exhibition airworthiness certificate or a special category—limited airworthiness certificate is not required to be equipped with a means of indicating assigned altitude.

91.547 Ejection seats and explosive devices

An ejection seat or associated egress or jettison system containing an explosive device, and fitted to an aircraft that has a special category airworthiness certificate must comply with rule 91.501(2)(i)(D) or rule 91.501(2)(ii)(B).

Subpart G — Operator Maintenance Requirements

91.601 Purpose

- (a) This subpart prescribes the requirements to maintain Mongolian registered aircraft operating within or outside of Mongolia.
- (b) Except for the following rules, this subpart does not apply to a microlight aircraft that is maintained in accordance with Part 103:
 - (1) rule 91.605(e)(2) (test and inspection of automatic pressure altitude reporting system if the microlight aircraft is equipped with a SSR transponder):
 - (2) rule 91.605(e)(3) (SSR transponder):
 - (3) rule 91.605(e)(8) (flotation equipment):
 - (4) rule 91.616 (maintenance logbook - Class 2 microlight aircraft):
 - (5) rule 91.617 (maintenance records - Class 2 microlight aircraft):
 - (6) rule 91.621 (transfer of maintenance records):
 - (7) rule 91.623 (retention of records).
- (c) Except for the following rules, this subpart does not apply to a glider that is maintained in accordance with Part 104:
 - (1) rule 91.605(e) (maintenance of instruments and equipment):
 - (2) rule 91.613 (operational flight check):
 - (3) rule 91.615 (annual review of airworthiness):
 - (4) rule 91.616 (maintenance logbook):
 - (5) rule 91.617 (maintenance records):
 - (6) rule 91.621 (transfer of maintenance records):
 - (7) rule 91.623 (retention of records).

91.602 Maintenance requirements before flight

- (a) Except as provided in paragraph (b) and rule 91.611, a person must not operate an aircraft unless the requirements prescribed in rules 91.603, 91.605, and 91.615 have been complied with.
- (b) Paragraph (a) does not apply to a person operating an aircraft if a special flight permit has been issued for the aircraft in accordance with Part 21.

91.603 General maintenance requirements

- (a) The operator of an aircraft must ensure that—
- (1) the aircraft is maintained in an airworthy condition; and
 - (2) every applicable airworthiness directive is complied with in accordance with the requirements prescribed in Part 39; and
 - (3) the aircraft is inspected under this Subpart; and
 - (4) except for instruments and equipment that are permitted to be inoperative under rule 91.537, every defect is rectified before flight; and
 - (5) any inoperative instrument or item of equipment that is permitted to be inoperative under rule 91.537, is repaired, replaced, removed, or inspected at the next inspection required by the maintenance programme under which the aircraft is maintained; and
 - (6) maintenance on the aircraft is performed in accordance with the requirements prescribed in this Subpart, Part 43, and any other applicable rule; and
 - (7) the aircraft is certified for release-to-service under Part 43 after the performance of any maintenance on the aircraft; and
 - (8) every system that is required under Subpart F for indicating the presence of carbon monoxide in the cabin of the aircraft is serviceable and within any applicable life limit for the system.
- (b) The operator of an aircraft must ensure compliance with the airworthiness limitations mandated by the airworthiness authority of the State of Design in the instructions for continued airworthiness issued for the aircraft.
- (c) Except as provided in paragraphs (d) to (f), the operator of an aircraft must ensure compliance with—
- (1) the manufacturer's recommended overhaul intervals; and
 - (2) for an aircraft that has a special category—exhibition airworthiness certificate or a special category—limited airworthiness certificate, the replacement of lifed components as specified in the maintenance programme for the aircraft.
- (d) Products and components may be operated beyond the manufacturer's recommended TBO if the operator complies with TBO escalation procedures that are detailed in a maintenance programme that is approved under Part 115, Part 119 or approved under rule 91.607.
- (e) Despite paragraph (d), a piston engine fitted to an aircraft that is not used for hire or reward operations may be operated beyond the manufacturer's recommended TBO if the piston engine is maintained in accordance with an engine TBO escalation programme that is acceptable to the Director.
- (f) Despite paragraph (d), a propeller fitted to an aircraft that is not used for air operations may be operated beyond the manufacturer's recommended calendar TBO if the propeller is inspected in accordance with methods acceptable to the Director at 5 yearly intervals, except that propellers must be overhauled at the manufacturer's recommended operating hours TBO.

91.605 Maintenance programmes and schedules

- (a) Subject to paragraphs (b), (c), and (d), the operator of an aircraft must maintain the aircraft under—
- (1) a maintenance programme approved under Part 115; or
 - (2) a maintenance programme approved under Part 119; or

- (3) a maintenance programme approved under rule 91.607; or
 - (4) the manufacturer's maintenance schedule; or
 - (5) if the aircraft is powered by a piston engine and has a MCTOW of 2730 kg or less, a maintenance programme that is acceptable to the Director and includes at least the following:
 - (i) details of the responsibilities and standards for maintenance of the aircraft in accordance with the applicable rule requirements;
 - (ii) details of pre-flight checks;
 - (iii) details of scheduled maintenance checks and inspections.
- (b) The operator of an aircraft that is—
- (1) used for air operations under the authority of an air operator certificate issued by the Director under the Act and Part 119 must maintain the aircraft under the maintenance programme that is required by Part 119 for the issue of the air operator certificate; or
 - (2) used for adventure aviation operations under the authority of an adventure aviation operator certificate issued by the Director under the Part 115 must maintain the aircraft under the maintenance programme that is required by Part 115 for the issue of the adventure aviation operator certificate; or
 - (3) issued with a special category airworthiness certificate must maintain the aircraft under a valid maintenance programme approved under rule 91.607 for the holder of the certificate of registration for the aircraft.
- (c) If the manufacturer's maintenance schedule referred to in paragraph (a)(4) does not provide for an aircraft that operates for less than 100 hours of time in service per year, the operator must ensure that the manufacturer's 100-hour inspection or an equivalent inspection is completed within the preceding 12 months.
- (d) If the Director determines that a manufacturer's maintenance schedule referred to in paragraph (a)(4) is deficient, the Director may require the operator to submit a maintenance programme for approval under rule 91.607.
- (e) Except as provided in paragraph (f) and rule 91.611, the operator of an aircraft must not operate the aircraft unless—
- (1) every aircraft radio station that is required to be installed in the aircraft under Subpart F for operations under IFR has been tested and inspected under Part 43, Appendix B within the preceding 24 months; and
 - (2) every static pressure system, altimeter instrument, or automatic pressure altitude reporting system that is required to be installed in the aircraft under Subpart F, or required for an SSR transponder installed in the aircraft, has been tested and inspected under Part 43, Appendix D—
 - (i) within the preceding 24 months; and
 - (ii) following any opening and closing of the static pressure system, except for the use of system drain and alternate static pressure valves, or where self-sealing disconnect coupling is provided; and
 - (iii) following installation of, or maintenance on, the automatic pressure altitude reporting system where data correspondence error could be introduced; and
 - (3) every SSR transponder that is required to be installed in the aircraft under Subpart F has been tested and inspected, under Part 43, Appendix E within the preceding 24 months; and

- (4) every ELT that is required to be installed in the aircraft under Subpart F—
 - (i) has been tested and inspected under—
 - (A) Appendix F of Part 43 within the previous 12 months or 100 hours of aircraft time in service, whichever is the sooner, or
 - (B) for an aircraft maintained under a maintenance programme required by rule 119.63, the scheduled intervals, which must not be more than 12 months, as described in the approved maintenance programme; and
 - (ii) has been tested in accordance with the manufacturer's instructions within the previous 24 months; and
 - (iii) has the battery replaced in accordance with the manufacturer's instructions, when the life of the battery, as established by the manufacturer, has expired; and
 - (5) every compass that is required to be installed in the aircraft under Subpart F has been calibrated—
 - (i) within the preceding 24 months; and
 - (ii) following any out of phase event that may affect the calibration of the compass unless the aircraft manufacturer specifies otherwise; and
 - (6) every first aid kit that is required to be installed in the aircraft under Subpart F has been inspected—
 - (i) within the preceding 12 months to ensure that appropriate quantities of items are included and time-expired items are replaced; and
 - (ii) after every reported use to ensure that appropriate quantities of items are included; and
 - (7) every portable fire extinguisher that is required to be installed in the aircraft under Subpart F has been inspected for condition and tested in accordance with the manufacturer's instructions or other equivalent instructions acceptable to the Director within the preceding 12 months; and
 - (8) all flotation equipment that is required to be installed in the aircraft under Subpart F has been inspected for condition and tested in accordance with the manufacturer's instructions or other equivalent instructions acceptable to the Director within the preceding 12 months; and
 - (9) the aircraft's empty weight and centre of gravity is re-established if—
 - (i) changes have been made to the aircraft that could affect the empty weight and centre of gravity; or
 - (ii) the operator has any reason to suspect that the information in the aircraft's flight manual is no longer accurate; and
 - (10) for a powered aircraft with a maximum certificated seating capacity of 4 or more seats, the aircraft has been weighed within the preceding 10 years.
- (f) The operator of an aircraft that is maintained under a maintenance programme referred to in paragraphs (a)(1) or (a)(2) is not required to comply with any particular requirement in paragraph (e) if the maintenance programme for the aircraft includes a test, inspection, or other action that is equivalent to the particular requirement in paragraph (e).
- (g) The operator of an aircraft must—
- (1) identify in the maintenance logbook for the aircraft which maintenance option under paragraph (a) is to be used for the aircraft; and

- (2) if the maintenance programme is one that is approved under Part 119 or approved under rule 91.607, identify in the maintenance programme the person who is responsible for scheduling the maintenance that is required in the programme; and
 - (3) if changing from the maintenance programme or option identified under paragraph (1) to another programme or option under paragraph (a), schedule the inspections required by the new programme or schedule, to provide for the continued airworthy condition of the aircraft; and
 - (4) provide a copy of the applicable maintenance programme or schedule to the person who performs maintenance on the aircraft, and upon request to the Director.
- (h) The tests and inspections required by paragraphs (e)(1), (e)(2)(i), (e)(3), and the 12 month test and inspection requirement in paragraph (e)(4)(i)(A) do not need to be performed if—
- (1) the aircraft has been inspected for the grant of an airworthiness certificate under Part 21 within the preceding 12 months; and
 - (2) the applicable equipment was installed in the aircraft when the inspection specified in paragraph (1) was performed.

91.607 Approval of maintenance programmes

- (a) An applicant for the approval of a maintenance programme referred to in rule 91.605(a)(2) must complete form CAA 24091/02, and submit it to the Director together with the document required by paragraph (b) and a payment of the appropriate application fee prescribed by Regulations made under the Act.
- (b) The applicant for the approval of a maintenance programme must provide the Director with a document containing—
- (1) a description of the maintenance programme; and
 - (2) procedures for maintenance control; and
 - (3) procedures for the compilation and retention of records, reports, and technical reference material; and
 - (4) instructions and procedures for the conduct of the maintenance for the particular aircraft type, including required inspections and tests; and
 - (5) an inspection schedule that is consistent with—
 - (i) the manufacturer's recommendations; and
 - (ii) the operator's service experience; and
 - (iii) the type of operation in which the aircraft is engaged; and
 - (6) procedures for extending inspection intervals in accordance with rule 91.611, if applicable; and
 - (7) procedures for assessing and controlling engine, propeller and component TBO escalations, if applicable; and
 - (8) procedures for changing an inspection interval on the basis of service experience, if applicable; and
 - (9) sample inspection forms, and instructions for their use; and
 - (10) sample reports and records, and instructions for their use.
- (c) The Director may approve a maintenance programme for an applicant if the Director is satisfied that—
- (1) the programme meets the requirements of paragraph (b); and

- (2) the approval of the maintenance programme is not contrary to the interests of aviation safety.
- (d) An applicant for approval of a maintenance programme for an aircraft that has a special category—exhibition airworthiness certificate or a special category—limited airworthiness certificate must, in addition to paragraph (b), provide the Director with a document containing—
- (1) details of a pre-flight inspection that must be carried out before the first flight of the day for the aircraft; and
 - (2) details of a post-flight inspection if a post-flight inspection is specified by the manufacturer or recognised military authority for the aircraft type; and
 - (3) details of an annual maintenance inspection; and
 - (4) if applicable, a schedule of lifed components and their associated life as specified by—
 - (i) the aircraft manufacturer; or
 - (ii) a military authority acceptable to the Director; or
 - (iii) the Director; and
 - (5) provisions for ensuring the continuing airworthiness of the aircraft; and
 - (6) additional inspections consistent with—
 - (i) the manufacturer's recommendations; and
 - (ii) service experience, including military operations; and
 - (iii) the type of operations in which the aircraft is engaged; and
 - (iv) the complexity of the aircraft.
- (e) A maintenance programme required by rule 91.605(b)(2) to which paragraph (d) applies must include the airframe, engines, propellers, rotors, appliances, survival equipment and emergency equipment.
- (f) Subject to any change that the Director may require under rule 91.609, a maintenance programme approved under paragraph (c) for an aircraft that has a special category airworthiness certificate is only valid for the period that the certificate of registration remains valid under rule 47.65.

91.609 Changes to maintenance programmes and schedules

- (a) An operator of an aircraft must, upon a written request from the Director, amend a maintenance programme or schedule for an aircraft if the Director considers that an amendment is necessary to satisfy the continuing airworthiness requirements for the aircraft.
- (b) If an operator discontinues a maintenance programme that is approved under rule 91.607, the operator must—
- (1) notify the Director in writing, within 7 days of the maintenance programme being discontinued; and
 - (2) reschedule the inspections required by the new maintenance programme from the date or time, as applicable, that the equivalent inspection was last completed for the aircraft.

91.611 Inspection planning latitude

- (a) Unless expressly prohibited by these rules, an airworthiness directive, or a manufacturer's mandatory inspection requirement, the inspection intervals required by rule 91.605 may be extended by up to 10% to allow for maintenance planning purposes.
- (b) If the extension provisions of paragraph (a) are applied to an aircraft—
- (1) the new extended date, or aircraft operating hours or cycles, whichever is applicable, for the inspection must be recorded in the appropriate maintenance logbook or technical log; and
 - (2) the next required inspection interval must start from the beginning of the extension period to ensure that any extension that is applied to an inspection interval is not cumulative.

91.613 Operational flight check

- (a) A person performing an operational flight check that is required by rule 43.103(a)(4)(i) must—
- (1) hold a valid pilot licence and type rating for the aircraft; and
 - (2) check that the flight characteristics of the aircraft have not appreciably changed as a result of the maintenance; and
 - (3) record any defects found during the operational flight check in the technical log.
- (b) A person performing an operational flight check under paragraph (a) must not carry any other person on the aircraft unless that person is required to perform an essential function that is associated with the flight check.

91.615 Review of airworthiness

- (a) Except as provided in paragraphs (b) and (c), a person must not operate an aircraft unless—
- (1) a review of airworthiness for the aircraft has been certified as completed in accordance with Subpart D of Part 43 within—
 - (i) the preceding 365 days; or
 - (ii) for an aircraft that has a special category airworthiness certificate that is not operated for hire or reward, the preceding 730 days; or
 - (2) the aircraft has been issued with an airworthiness certificate in accordance with Part 21 within the preceding 365 days.
- (b) Paragraph (a) does not apply to an aircraft that is operated in accordance with the following Parts under the authority of an air operator certificate issued in accordance with Part 119:
- (1) Part 121:
 - (2) Part 125:
 - (3) Part 135 if the aircraft is subject to a maintenance review in accordance with rule 135.415(a).
- (c) A person may operate an aircraft after the date at which a review of airworthiness is required under paragraph (a)—
- (1) for a period of not more than 36 days to allow for maintenance planning purposes if a new extended date, within the 36 day period, for the review of airworthiness is recorded in the technical log; or

- (2) if the sole purpose of operating the aircraft is to enable the review of airworthiness to be completed.

91.616 Maintenance logbooks

An operator of an aircraft, except a Class 1 microlight aeroplane, must—

- (1) provide appropriate maintenance logbooks for the aircraft; and
- (2) ensure that the maintenance logbooks are not carried in the aircraft.

91.617 Maintenance records

(a) An operator of an aircraft, except a Class 1 microlight aeroplane, must ensure that for each airframe, and each product and component that has a finite life or a TBO recommended by the manufacturer, accurate records are compiled in the appropriate maintenance logbook for the total time-in-service, and if applicable the total cycles.

(b) An operator of an aircraft, except a Class 1 microlight aeroplane, must ensure that for each product and component, the maintenance records required under rule 43.69 are compiled and retained.

(c) An operator of an aircraft that is involved in an accident must ensure that descriptive details of the circumstances of the accident, and descriptive details of the resultant damage to the aircraft are recorded in the appropriate maintenance logbook.

(d) The records required in paragraphs (a), (b), and (c) may be kept in plain language form, or in coded form provided that the coded form provides for the preservation and retrieval of information that is required to be recorded.

91.619 Technical log

(a) Except as provided in paragraph (c), the operator of an aircraft must provide a technical log for the aircraft with provision for recording the following information:

- (1) the name of the operator:
- (2) the registration mark, type, and model of the aircraft:
- (3) the identity of the maintenance programme or schedule required under rule 91.605(a), to which the aircraft is maintained:
- (4) a statement of the maintenance status of the aircraft including—
 - (i) the identity of the next scheduled inspection and the date or hours due; and
 - (ii) any requirement under rule 43.103(a)(4)(i) for an operational flight check to be carried out:
- (5) the date or hours at which any other maintenance is due prior to the next scheduled inspection:
- (6) the date at which the next annual review of airworthiness or maintenance review is due:
- (7) the daily hours flown:
- (8) the total time in service:
- (9) if applicable,—
 - (i) the daily cycles used; and
 - (ii) the total cycles:
- (10) any defects found during the pre-flight inspection, during a flight, or following a flight:

- (11) details of the rectification of defects that occur between scheduled inspections and the certification for release-to-service for the rectification:
 - (12) details of any deferred rectification of defects including any instruments and equipment that are inoperative in accordance with rule 91.537.
- (b) The operator of an aircraft must ensure that the information specified in paragraph (a) is accurately recorded in the technical log and that the information is current.
- (c) The holder of an air operator certificate issued in accordance with Part 119 may record the following information in a format other than in the technical log, if that format and the associated procedures are acceptable to the Director, and the information is accurate and available to the pilot-in-command on request:
- (1) the identity of the next scheduled inspection and the date or hours due:
 - (2) the date or hours at which any other maintenance is due prior to the next scheduled inspection:
 - (3) the total time-in-service:
 - (4) the total cycles.

91.621 Transfer of maintenance records

The holder of a Mongolian certificate of registration for an aircraft who transfers the possession of the aircraft to another person in accordance with Part 47 must, at the time of the transfer of the aircraft, transfer to that person—

- (1) the records specified in rule 91.617(b); and
- (2) the records specified in rule 91.617(a) if they are not included in the records transferred under paragraph (1).

91.623 Retention of records

- (a) Except as provided in paragraphs (b) and (c), the operator of an aircraft must retain the records specified in rule 91.617 for at least 12 months after the product or component is withdrawn from service.
- (b) The record of maintenance information required under rule 43.69(a)(1) only needs to be retained until the maintenance is repeated or superseded by other maintenance of equivalent scope and detail, or for a period of at least 5 years after the maintenance is performed, whichever occurs first.
- (c) N/A
- (d) The operator of an aircraft must retain the technical log required under rule 91.619 for a period of at least 12 months after the date of the last entry in the technical log.

Subpart H — Special Flight Operations

91.701 Aerobatic flight

- (a) Except as provided in paragraph (e), a pilot-in-command must not operate an aircraft in aerobatic flight—
 - (1) over an area that is within a horizontal distance of 600 metres of a congested area of a city, town, or settlement; or
 - (2) over an area that is within a horizontal distance of 600 metres of an open air assembly of persons; or

- (3) within any controlled airspace except with the authorisation of ATC.
- (b) Except as provided in paragraphs (c) and (f), a pilot-in-command must not operate an aircraft in aerobatic flight below a height of 3000 feet (900m) above the surface.
- (c) A pilot-in-command may operate an aircraft in aerobatic flight below a height of 3000 feet (900m) above the surface—
- (1) but not less than 1500 feet (450m) above the surface if the pilot holds an aerobatic rating issued in accordance with Part 61; and
 - (2) below a height of 1500 feet (450m) above the surface if the pilot—
 - (i) holds an aerobatic rating issued in accordance with Part 61; and
 - (ii) does not perform aerobatic flight below the height authorised in their aerobatic rating; and
 - (iii) is participating in an aviation event.
- (d) A pilot-in-command must not operate an aircraft in aerobatic flight carrying a passenger unless—
- (1) the pilot holds an aerobatic rating issued in accordance with Part 61; and
 - (2) the flight is conducted at a height not less than 3000 feet (900m) above the surface.
- (e) A pilot-in-command may operate an aircraft in aerobatic flight over an area that is within a horizontal distance of 600 metres of spectators at an aviation event if the pilot is participating in that aviation event in accordance with rule 91.703.
- (f) A pilot of a glider may operate a glider in aerobatic flight below a height of 3000 feet (900m) above the surface without holding an aerobatic rating issued in accordance with Part 61 if—
- (1) the aerobatic flight is for the purpose of spin training; and
 - (2) the flight is conducted at a height not less than 1000 feet (300m) above the surface.

91.703 Aviation events

- (a) No person shall conduct an aviation event, and no person shall operate an aircraft in an aviation event, unless the organiser of the event is the holder of an aviation event authorisation issued by the Director.
- (b) Each applicant for an aviation event authorisation shall submit an aviation event plan to the Director at least 90 days prior to the start of the aviation event.
- (c) The aviation event plan required by paragraph (b) shall—
- (1) contain the following information about the proposed aviation event—
 - (i) name, position, and address of the organiser; and
 - (ii) place, date, and time; and
 - (iii) type of event; and
 - (iv) details of the structure of the organisation including persons who are responsible for supervising the aviation; and
 - (v) details of the flying programme; and
 - (vi) detailed plan and description of the site with sufficient detail to show compliance with the requirements of paragraph (d); and
 - (vii) details of control methods to be used for the safety of the spectators; and

- (viii) details of emergency services to be provided; and
 - (2) be acceptable to the Director.
- (d) A pilot-in-command of an aircraft participating in an aviation event shall—
- (1) for display flights, other than a display of agricultural operations or helicopter operations, operate at a height of at least 100 feet (30m) above the surface; and
 - (2) fly the aircraft aligned with reference to a display line sufficiently distanced from spectators so as not to cause undue risk to persons or property on the surface; and
 - (3) not carry any passengers; and
 - (4) not fly over any spectator area; and
 - (5) not conduct any manoeuvre between the display line and any spectator area; and
 - (6) with the exception of a helicopter hovering or taxiing, not initiate any manoeuvre in the direction of any spectator area.
- (e) Paragraph (a) shall not apply to aviation events at which—
- (1) not more than 500 people are in attendance; or
 - (2) there are no more than three participating aircraft; or
 - (3) the aircraft are in one formation

91.705 Parachute-drop operations

- (a) A pilot-in-command of an aircraft performing a parachute-drop operation must hold a parachute-drop rating issued by the Director under Part 61.
- (b) An operator of an aircraft performing a parachute-drop operation must ensure that—
- (1) the aircraft used to perform the operation has a valid standard category airworthiness certificate; and
 - (2) the configuration of the aircraft is appropriate for the parachute-drop operation; and
 - (3) the aircraft has adequate interior room and satisfactory egress for each parachutist to be carried; and
 - (4) the aircraft cabin has no handles or fittings which could cause the inadvertent opening of a parachute in the aircraft or during egress by any parachutist; and
 - (5) suitable points on the aircraft are used for the attachment of static lines; and
 - (6) the aircraft flight manual authorises flight with a door removed, or open, in flight; and
- (c) A pilot-in-command of an aircraft performing a parachute-drop operation must ensure that—
- (1) each person carried in the aircraft, other than a person intending to make a parachute descent, —
 - (i) occupies a seat and fastens his or her safety belt during take-off and landing; and
 - (ii) wears an emergency or reserve parachute assembly; and
 - (iii) is trained in the use of the emergency or reserve parachute assembly; and
 - (iv) is briefed on the general procedures to be followed in an aircraft emergency including the method to be used for exiting the aircraft; and
 - (2) each person carried in the aircraft who intends to make a parachute descent —
 - (i) is not in a position in the aircraft that could hazard the safety of the operation or the aircraft occupants through inadvertent interference with the controls; and

- (ii) is briefed on the general procedures to be followed in an aircraft emergency including the method to be used for exiting the aircraft.
- (d) A pilot-in-command of an aircraft performing a parachute-drop operation must not permit a person to make a parachute descent from the aircraft, unless—
- (1) the person or persons making the descent have provided the pilot with the details of the proposed descent prior to take-off; and
 - (2) the pilot is satisfied that each person's descent is—
 - (i) authorised by a parachute organisation; or
 - (ii) authorised by a holder of an adventure aviation operator certificate issued by the director under Part 115 if the certificate authorises tandem parachute operations; or
 - (iii) approved by the Director.

91.707 Emergency parachute assemblies

A pilot-in-command of an aircraft must not allow a parachute assembly that is available for emergency use to be carried in the aircraft unless the parachute assembly—

- (1) meets the requirements of Appendix A.25; and
- (2) has been adequately protected from damage from any condition or substance that may be harmful to the materials from which the parachute assembly has been constructed; and
- (3) has been maintained in accordance with the manufacturer's instructions and packed within the preceding calendar year by—
 - (i) the holder of a parachute technician rating issued by a parachute organisation; or
 - (ii) the parachute manufacturer; or
 - (iii) a Mongolian Defence Force parachute technician; or
 - (iv) a person otherwise approved by the Director; and
- (4) is accompanied by a packing card containing certification of serviceability by the person who maintained or packed the parachute.

91.709 Towing gliders

- (a) A person must not tow a glider in flight unless that person holds a glider tow rating issued under Part 61.
- (b) A person must not tow a glider in flight unless—
 - (1) the aircraft used for towing is operated at airspeeds below the maximum airspeed specified for aero-tow in the glider flight manual; and
 - (2) the towing load does not exceed the maximum load specified in the aircraft flight manual; and
 - (3) the person has checked the operation of the tow hook of the aircraft to be used before the flight; and
 - (4) the person uses the take-off, glider release, airspeed, and emergency signals established by a gliding organisation for the pilots of tow aircraft and gliders; and
 - (5) the take-off distance to clear a 50 foot obstacle with the glider in tow does not exceed 85% of the take-off run available; and

- (6) the aircraft is capable of maintaining a rate of climb of at least 200 feet (60m) per minute at 1000 feet (300m) above the aerodrome with the glider in tow.
- (c) A person must not operate an aircraft to tow a glider in flight unless—
 - (1) the aircraft to be used is equipped with—
 - (i) a tow hook and attachment assembly; and
 - (ii) a pilot-activated quick release capable of releasing the tow line from the tow hook with the glider in tow and while the tow aircraft is in flight; and
 - (2) the tow line to be used meets the requirements of Appendix A.26; and
 - (3) if more than one glider is being towed, the tow lines to be used are—
 - (i) one for each glider; and
 - (ii) of a length that provides a distance of not less than 50 m between any glider and the towing aircraft; and
 - (iii) of a length that provides a trailing separation of not less than 30 m between each glider; and
 - (iv) attached by a single tow ring to the aircraft, and capable of separation on release from the aircraft.
- (d) Paragraphs (a), (b), and (c) do not apply to the towing of a hang glider in flight.

91.711 Towing objects other than gliders

- (a) No pilot shall tow an object other than a glider in flight unless—
 - (1) they hold—
 - (i) a private pilot licence and a tow rating issued under Part 61; or
 - (ii) a commercial pilot licence issued under Part 61; or
 - (iii) an airline transport pilot licence issued under Part 61; and
 - (2) the aircraft—
 - (i) is equipped with a tow hook and attachment assembly which has a quick release mechanism; and
 - (ii) has a positive rate of climb at the altitudes to be operated.
- (b) No pilot operating an aircraft that is towing an object other than a glider shall carry any passengers.

Subpart I — Foreign Registered Aircraft Operations and Operation of Mongolian Registered Aircraft Outside Mongolia

91.751 Applicability

This Subpart applies to the operation of Mongolian registered aircraft outside Mongolia and the operation of foreign registered aircraft within Mongolia.

91.753 Operations of Mongolian registered aircraft outside Mongolia

Each person operating a Mongolian registered aircraft shall—

- (1) when over the high seas, comply with Annex 2 to the Convention on International Civil Aviation; and

- (2) when operating within a foreign State, comply with the operating and flight rules of that State; and
- (3) comply with this Part, so far as it is not inconsistent with applicable rules of the foreign country where the aircraft is being operated, or Annex 2 to the Convention.

91.755 Special rules for foreign aircraft operations

- (a) **General.** In addition to the other applicable rules of this Part, a person operating a foreign registered aircraft within Mongolia must comply with this rule.
- (b) **VFR.** A person must not conduct an aircraft operation under VFR that requires two-way radio communications under this Part unless at least one flight crew member on the aircraft is able to conduct two-way radio communications in the English language and is on duty during the operation.
- (c) **IFR.** A person must not operate an aircraft under IFR unless—
 - (1) the aircraft is equipped with—
 - (i) radio equipment allowing two-way radio communications with ATS when the aircraft is being operated in controlled airspace; and
 - (ii) a navigation system which will enable the aircraft to proceed in accordance with its flight plan; and
 - (2) the person piloting the aircraft—
 - (i) holds a current Mongolian instrument rating, or holds a current instrument rating issued by the country of that aircraft's registry; and
 - (ii) is familiar with the Mongolian IFR en route, holding, and approach procedures published in the AIP Mongolia; and
 - (3) at least one flight crew member of the aircraft is able to conduct two-way radio telephone communications in the English language and the flight crew member is on duty while the aircraft is operating under IFR.

Subpart J — Operating Noise Limits

91.801 Purpose

This Subpart prescribes limitations on the operation of civil aircraft in Mongolia in respect to aircraft noise and engine emission.

91.803 Aircraft noise level compliance

- (a) No person may operate an aircraft to or from an aerodrome within Mongolia, unless —
 - (1) for Mongolian registered aircraft, the Director is satisfied that the aircraft complies with the applicable aircraft noise standards specified in Appendix C to Part 21; and
 - (2) for foreign registered aircraft, that aircraft is certificated or validated by the State of Registry to comply with standards that are equivalent to the applicable aircraft noise standards specified in ICAO Annex 16, Volume I.
- (b) Notwithstanding paragraph (a), a person may not operate a subsonic turbojet or turbofan powered aeroplane to or from an aerodrome within Mongolia unless that aeroplane is certificated to comply with noise standards that are at least equal to the aircraft noise standards specified in ICAO Annex 16, Volume I, Chapter 3.

91.805 Aircraft sonic boom

- (a) No person may operate an aircraft at a Mach number greater than 0.92 unless approved by the Director and in compliance with any conditions and limitations specified in the approval.
- (b) No person may operate an aircraft that has a maximum operating speed in excess of a Mach number of 0.92 within the territorial limits of Mongolia unless the information that is available to the pilot-in-command includes flight limitations to ensure that flights entering or leaving Mongolia do not cause a sonic boom to reach the surface within Mongolia.
- (c) (c) A pilot-in-command of an aircraft that has a maximum operating speed in excess of a Mach number of 0.92 must comply with the flight limitations required under paragraph (b).

91.807 Engine emission compliance

No person may operate a turbojet or turbofan powered aircraft to or from an aerodrome within Mongolia, unless —

- (1) for Mongolian registered aircraft, the Director is satisfied that the aircraft complies with the applicable aircraft engine emission standards specified in Appendix C to Part 21; and
- (2) for foreign registered aircraft, that aircraft is certificated or validated by the State of Registry to comply with standards that are equivalent to the applicable aircraft engine emission standards specified in ICAO Annex 16, Volume II.

Appendix A — Instrument and equipment specifications

Instruments and equipment required by Subpart F shall meet the following specifications and requirements:

A.1 Markings and placards

(a) A marking or placard that is required to be displayed on or in an aircraft must be displayed in a conspicuous place and in such a manner to minimise the risk of erasure, disfigurement, obscuring, or removal.

(b) Each unit of measure used on a marking or placard must be the same as that on any related instrument or in the related flight manual.

A.2 Fuel and oil markings

(a) Fuel contents gauge. Each fuel contents gauge calibrated in US gallons shall be clearly marked to show that the calibration is in US gallons.

(b) Fuel and oil placards. Each aircraft shall be placarded in the immediate vicinity of each fuel and oil filler with the specification and/or grade of fuel or oil as appropriate.

A.3 Seating

A seat and berth must meet the requirements of TSO C25, TSO C39, or TSO C127 as applicable.

A.4 Restraints

(a) Each safety belt must—

(1) meet the requirements of—

(i) TSO C22; or

(ii) ISO/FIA 8853; or

(iii) FIA 8854; or

(iv) for ex-military aircraft, a military drawing and order number or any other appropriate military designation or specification number; or

(2) be proof loaded to 50% of the rated strength required by those standards every 12 months if the identification labels required by the standards in paragraph (a)(1) are missing.

(b) A torso restraint—

(1) must meet the requirements of—

(i) TSO C114; or

(ii) for ex-military aircraft, a military drawing and order number or any other appropriate military designation or specification number.

(c) If a shoulder harness is fitted with an inertia reel, the inertia reel must meet the requirements of US Military Specification MIL-R-8236.

A.5 Child restraint systems

A child restraint system must—

(1) be secured to the aircraft seat or berth by a safety belt meeting the requirements of TSO C22; and

- (2) not be fitted with a tether strap that secures the top of the infant or child seat; and
- (3) meet the requirements of—
 - (i) TSO C100; or
 - (ii) N/A;
 - (iii) N/A;
 - (iv) United States Standard FMVSS 213; or
 - (v) European Standard ECE 44.

A.6 Aircraft lights

- (a) An aircraft anti-collision light system must comprise—
 - (1) a red rotating beacon; or
 - (2) an aviation red or aviation white capacitor discharge light that meets the requirements of—
 - (i) TSO C96; or
 - (ii) the minimum standards of the applicable aircraft design; or
 - (iii) another standard acceptable to the Director.
- (b) N/A
- (c) Aircraft position lights must—
 - (1) meet the requirements of TSO C30; and
 - (2) consist of—
 - (i) an unobstructed steady red light projected above and below the horizontal plane through an angle from dead ahead to 110 degrees left; and
 - (ii) an unobstructed steady green light projected above and below the horizontal plane through an angle from dead ahead to 110 degrees right; and
 - (iii) an unobstructed steady white light projected above and below the horizontal plane rearward through an angle of 140 degrees equally distributed on the left and right sides.

A.7 Aircraft time-in-service recorders

An aircraft time-in-service recorder must meet the requirements of TSO 2001.

A.8 Pressure altimeters

- (a) For pressurised aircraft to be operated at altitudes above 25 000 feet (7500m), each sensitive pressure altimeter shall—
 - (1) for a MCTOW not exceeding 5700 kg, be—
 - (i) a counter/pointer or drum pointer altimeter at the normal pilot-in-command position; and
 - (ii) a counter/pointer, drum pointer, or three pointer altimeter at other crew stations; or
 - (2) for a MCTOW exceeding 5700 kg, be—
 - (i) a counter/pointer type at the normal pilot-in-command position; and
 - (ii) either a counter/pointer or drum/pointer type at other crew stations.

- (b) For aircraft to be operated IFR at altitudes not above 25 000 feet (7500m), each sensitive pressure altimeter shall be counter/pointer, drum/pointer, or three pointer type.
- (c) Each three pointer altimeter shall have a striped low altitude warning sector that is fully displayed at all altitudes up to 10 000 ft (3000m) and progressively withdrawn above that altitude and either—
- (1) a 10 000 ft (3000m) pointer that cannot be obscured by any other pointers; or
 - (2) a concentric track indicating 10 000 ft intervals; or
 - (3) a combination of subparagraphs (1) and (2).
- (d) Each sensitive pressure altimeter shall—
- (1) meet the requirements of—
 - (i) TSO C10; or
 - (ii) British Standards G115, G201, or G226; or
 - (2) be adjustable for barometric pressure in hector Pascals or millibars and be presented so as to enable altitudes to be easily read to within 20 ft (6m).
- (e) Aircraft not required to be fitted with a sensitive pressure altimeter shall be fitted with an altimeter calibrated in increments of not more than 200 ft.

A.9 Communication and navigation equipment

- (a) Except as provided in paragraph (c), radio communication and navigation equipment must meet the requirements of—
- (1) for Level 1—
 - (i) communication equipment, one of the following TSO as applicable: C31, C32, C37, C38, or C50; or
 - (ii) navigation equipment, one of the following TSO as applicable: C34, C35, C36, C40, C41, C60, C94, or C129; or
 - (iii) United Kingdom Civil Aviation Authority approval for Category WR, VC, or LA Class I; or
 - (iv) N/A; or
 - (2) for Level 2—
 - (i) United Kingdom Civil Aviation Authority approval for Category LA Class II; or
 - (ii) Pub 50 V or L; or
 - (3) for Level 3, United Kingdom Civil Aviation Authority approval for Category LA Class III or Category G; or
 - (4) for Level 4—
 - (i) the requirements of the Radiocommunications Regulations 2001; and
 - (ii) compass safe distances determined in accordance with British Standard 3G,100: Part 2, Section 2.
- (b) If 2 independent radio communication systems are required—
- (1) each system must have an independent antenna; or
 - (2) the two systems may use a single rigidly supported non-wire antenna.
- (c) The following equipment may be used to meet the radio communication equipment requirements for operations in gliders, amateur built aircraft, and microlight aircraft, if the

equipment installation conforms to acceptable technical data, and the transceiver is connected to a quarter-wave antenna permanently mounted on the aircraft—

- (1) equipment listed in United Kingdom Civil Aviation Authority approval for Category G(a); or
- (2) any other equipment shown by a test programme and accepted by the Director as capable of meeting the applicable requirements of the United Kingdom Civil Aviation Authority approval referred to in paragraph(c)(1).

A.10 RNP, MNPS, and VSM equipment

Navigation systems and equipment installed for operation in RNP, MNPS, or VSM airspace must—

- (1) meet the performance requirements of ICAO Regional Supplementary Procedures Doc 7030 applicable to the airspace and routes being flown; and
- (2) for RNP operations, consist of two independent LRNS comprising INS, IRS/FMS, or GPS; and
- (3) meet the equipment and functional requirements—
 - (i) for operation in RNP airspace, contained in the ICAO Manual on Required Navigation Performance (RNP) Doc 9613; or
 - (ii) for operation in airspace designated with a VSM of 1000 feet (300m) above flight level 290, contained in the ICAO Manual on Implementation of a 300m (1000ft) Vertical Separation Minimum Between FL 290 and FL 410 Inclusive Doc 9574.

A.11 Category II and III equipment

(a) ILS localiser and glide slope equipment must meet the requirements of Radio Technical Commission for Aeronautics (RTCA) document number DO-195 for ILS localiser equipment and DO-192 for ILS glide slope equipment.

(b) A flight control guidance system must meet the performance requirements of an evaluation programme.

(c) A radio altimeter must—

- (1) display to the flight crew the wheel height of the main landing gear above the terrain to an accuracy of plus or minus 5 feet (1.5m) or 5%, whichever is greater, when the—
 - (i) pitch angle is plus or minus 5 degrees about the mean approach attitude; and
 - (ii) roll angle is 20 degrees in either direction; and
 - (iii) forward velocity is between the minimum approach speed and 200 knots; and
 - (iv) sink rate is not greater than 15 feet (4.5m) per second at altitudes from 100 feet (30m) to 200 feet (60m); and
 - (v) over level ground track actual altitude without significant lag or oscillation; and
- (2) when the aircraft is below 200 feet (60m) altitude and a change in terrain representing 10% of the aircraft's altitude occurs,—
 - (i) not unlock; and
 - (ii) have its display respond within 0.1 seconds; and
 - (iii) if the radar altimeter unlocks, re-acquire the signal in less than 1 second; and

- (3) if using a push to test feature, test the entire system at a simulated altitude of less than 500 feet (150m); and
 - (4) incorporate a positive failure warning any time there is a power loss or absence of ground return signals within the desired range of operating altitudes.
- (d) Other required instruments and equipment must be capable of performing the necessary Category II or III operations as listed in the operator's precision approach procedure manual required by rule 91.417.

A.12 First aid kits

Each first aid kit shall—

- (1) be placed in a container that—
 - (i) minimises the risk of theft or deterioration of the contents; and
 - (ii) ensures that any theft may be readily detected; and
- (2) be located and secured in such a manner that—
 - (i) the possibility of damage or loss as the result of an accident is minimised; and
 - (ii) there is no danger to the occupants of the aircraft; and
- (3) have its location marked—
 - (i) on the outside of any compartment containing the kit; and
 - (ii) for aircraft that do not exceed 5700 kg MCTOW, on the outside of the aircraft; and
- (4) when containing narcotics, be installed in an aircraft—
 - (i) in accordance with Drugs Regulations ; and
 - (ii) that when not in use can be locked, or placed in a lockable hangar, or have the first aid kit containing narcotics removed to a safe and secure location.

Liferafts shall be considered to be safe and secure locations for the storage of first aid kits containing narcotics.

A.13 Fire extinguishers

Each fire extinguisher shall—

- (1) be installed and secured in such a manner that it will not interfere with the safe operation of the aircraft or adversely affect the safety of crew or passengers; and
- (2) subject to subparagraph (4), be of a type and quantity of extinguishing agent suitable for the kinds of fires likely to occur in the compartment where the fire extinguisher is intended to be used; and
- (3) minimise the hazards of toxic gas concentrations; and
- (4) contain as an extinguishing agent only—
 - (i) bromochlorodifluoromethane (halon 1211); or
 - (ii) bromotrifluoromethane (halon 1301); or
 - (iii) carbon dioxide; or
 - (iv) dry powder; or
 - (v) another agent that provides an equivalent extinguishing action.

A.14 Emergency equipment

- (a) A life preserver must be equipped with a survival locator light.
- (b) A life preserver must meet the requirements of—
 - (1) for inflatable life preservers—
 - (i) TSO C13; or
 - (ii) European Norm EN 396; or
 - (iii) N/A;
 - (2) for constant wear anti-exposure coveralls, US Coastguard Type V PFD.
- (c) A life-raft must meet the requirements of TSO C70 and contain a survival kit.
- (d) The survival kit required in paragraph (c) must include—
 - (1) a canopy; and
 - (2) a radar reflector or a flare kit; and
 - (3) a life-raft repair kit; and
 - (4) a bailing bucket; and
 - (5) a signalling mirror; and
 - (6) a whistle; and
 - (7) a raft knife; and
 - (8) a compressed gas bottle for emergency inflation; and
 - (9) an inflation pump; and
 - (10) a 25 m retaining line; and
 - (11) a magnetic compass; and
 - (12) a dye marker; and
 - (13) a flashlight having at least 2 'D' cells or equivalent; and
 - (14) a fishing kit; and
 - (15) 2 oars or 2 glove paddles; and
 - (16) a 2 day supply of food rations supplying at least 1000 calories per day for every person that the raft is rated to carry; and
 - (17) 1200 mls of water for every 2 persons that the raft is rated to carry, or 1 sea water desalting kit; and
 - (18) a first aid kit suitable for treatment of minor injuries; and
 - (19) a book on survival appropriate for the area over which the aircraft is operated; and
 - (20) a sea anchor; and
 - (21) a water collection bag or cups.
- (e) A survival locator light must meet the requirements of TSO C85.

A.15 Emergency locator transmitters

- (a) An ELT(AF) and an ELT(S) must—
 - (1) meet the requirements of TSO C126; and
 - (2) transmit on both frequencies of 406 MHz and 121.5 MHz.

- (b) An ELT(AF) must—
- (1) be attached to the aircraft in such a manner that—
 - (i) the probability of damage to the ELT in the event of an accident or impact is minimised; and
 - (ii) the ELT mounting is to a primary load-carrying structure provided the attachment does not degrade the structural capability of the aircraft; and
 - (iii) a force of 450 newtons applied to the ELT mounting in the most flexible direction does not cause a static deflection greater than 2.5 mm relative to a section of adjacent structure located between 0.3 m and 1.0 m from the attachment site; and
 - (iv) the ELT and any external antenna can support a 100 g in the plus and minus directions of the 3 principal axes of the aircraft; and
 - (v) the ELT and any external antenna are as close to each other as possible; and
 - (vi) for a fixed or a deployable ELT(AF), the ELT and external antenna are attached as far aft as possible; and
 - (2) have its crash activation sensor—
 - (i) located so as to prevent inadvertent operation; and
 - (ii) axis orientated to sense a primary crash pulse along the longitudinal axis of the aircraft; and
 - (3) have its antenna—
 - (i) mounted to provide vertical polarisation with the aircraft in normal flight; and
 - (ii) for an external antenna, mounted not less than 0.6 m from any other VHF antenna unless the manufacturer specifies that a closer mounting may be used; and
 - (iii) for an internal antenna, insulated from metal parts and exposed to a window of at least 0.3 m square; and
 - (4) be fitted with vibration proof RF connectors on each end of the ELT-antenna coaxial cable; and
 - (5) have its location identified near the point of access.
- (c) An EPIRB must—
- (1) meet the requirements of 4280.1; and
 - (2) transmit on both frequencies of 406 MHz and 121.5 MHz.
- (d) An ELT(S) and EPIRB must—
- (1) be self buoyant; and
 - (2) be water resistant; and
 - (3) be portable.
- (e) A PLB must operate on both frequencies of 406 MHz and 121.5 MHz, and must—
- (1) meet the requirements of Australian/New Zealand Standard AS/NZS 4280.2; or
 - (2) be COSPAS-SARSAT type approved.
- (f) An ELT(S) must be stowed in the aircraft in a manner that allows it to be readily available to any person on the aircraft in the event of an emergency.

A.16 Oxygen

Oxygen used in aircraft shall be of Aviation Oxygen Standard which is gaseous oxygen with a minimum purity of 99%, maximum moisture of 0.0056 grams per cubic metre, and nil carbon monoxide.

A.17 Passenger oxygen masks

Each passenger oxygen mask shall meet the requirements of TSO C64.

A.18 Crew member on-demand oxygen masks

- (a) Each crew member on-demand oxygen mask must meet the requirements of TSO C78.
- (b) Each on-demand oxygen mask for flight crew members must, without causing undue delay in proceeding with emergency duties, be—
 - (1) capable of being placed on the face with one hand from the stowed position; and
 - (2) properly secured, sealed, and capable of supplying oxygen upon demand within five seconds; and
 - (3) able to provide for—
 - (i) the use of corrective eyeglasses without undue impairment of vision or loss of protection; and
 - (ii) communication by interphone with each flight crew member while in their normally seated position; and
 - (iii) communication between each of two flight crew member stations and at least one crew member station in each passenger compartment.

A.19 Oxygen equipment

- (a) Flight crew member oxygen equipment must provide an oxygen flow rate—
 - (1) for continuous flow equipment, that is the greater of—
 - (i) 2 litres per minute STPD; or
 - (ii) that required to maintain a MTOPP of 149 mm Hg when breathing 15 litres per minute BTPS with a tidal volume of 700 millilitres; and
 - (2) for on-demand equipment—
 - (i) for flights up to 35 000 feet (10500m) AMSL, not less than that required to maintain a MTOPP of 122 mm Hg; and
 - (ii) for flights above 35 000 feet (10500m) AMSL, not less than 20 litres per minute BTPS; and
 - (iii) for flights above 41 000 feet (12500m) AMSL, that progressively increases until not less than 15 mm Hg above ambient pressure and 30 litres per minute BTPS is achieved at 45 000 feet (13500m) AMSL; and
 - (3) for protective equipment, of 30 litres per minute BTPD at a pressure altitude of 8 000 feet AMSL.
- (b) Crew member and passenger oxygen equipment must provide an oxygen flow rate—
 - (1) for flights from 10 000 feet (3000m) to 18 500 feet (5700m) AMSL, not less than that required to maintain a MTOPP of 100 mm Hg when breathing 15 litres per minute BTPS with a tidal volume of 700 millilitres; and

- (2) for flights from 18 500 feet (5700m) to 40 000 feet (12000m) AMSL, not less than that required to maintain a MTOPP of 83.8 mm Hg when breathing 30 litres per minute BTPS with a tidal volume of 1100 millilitres; and
 - (3) for flights from 40 000 feet (12000m) to 45 000 feet (13500m) AMSL, not less than that required to maintain a MTOPP of 55 mm Hg when breathing 30 litres per minute BTPS with a tidal volume of 1100 millilitres.
- (c) Portable oxygen equipment must provide an oxygen flow rate of not less than—
- (1) 2 litres per minute STPD on a low setting; and
 - (2) 4 litres per minute STPD on a high setting.
- (d) On-demand oxygen regulators must meet the requirements of TSO C89.

A.20 Protective breathing equipment

Protective breathing equipment shall—

- (1) meet the requirements of TSO C99; and
- (2) protect users from the effects of—
 - (i) smoke; or
 - (ii) carbon dioxide; or
 - (iii) other harmful gases; or
 - (iv) an oxygen deficient environment caused by other than aeroplane depressurisation.

A.21 Crew member portable protective breathing equipment

- (a) Except as provided in paragraph (b), crew member portable protective breathing equipment shall meet the requirements of TSO C116.
- (b) Crew member portable protective breathing equipment may consist of a portable oxygen supply connected to protective breathing equipment that allows unrestricted performance of crew member duties.

A.22 Transponder equipment

Each SSR transponder must meet-

- (1) the requirements of TSO C74c; or
- (2) for Mode S capable equipment, the appropriate class of TSO C112.

A.23 Altitude encoder equipment

Each altitude encoder must meet the requirements of TSO C88.

A.24 Altitude alerting system or device

For operation below 3000 feet (900m) AGL, the altitude alerting system or device need only provide one signal, either visual or aural.

A.25 Parachute assembly for emergency use

A parachute assembly for emergency use must meet the requirements of—

- (1) an applicable type certificate; or

- (2) TSO C23; or
- (3) a military drawing and order number or any other military designation or specification number; or
- (4) LTF 35/03; or
- (5) European Norm EN 12491; or
- (6) AFNOR and DHV standards.

A.26 Glider tow lines

A Glider tow line must—

- (1) except as provided in paragraph (2), have a breaking strength of not less than 80% or more than 200% of the MCTOW of the glider to be towed; and
- (2) if the tow line used has a breaking strength of more than 200% of the MCTOW of the glider to be towed, have a safety link installed at the point of attachment to—
 - (i) the glider with a breaking strength of not less than 80% of the glider's MCTOW but not more than twice the glider's MCTOW; and
 - (ii) the aircraft with a breaking strength of at least 100% of the glider's MCTOW but not more than twice the glider's MCTOW.

Appendix B – Transitional arrangements N/A
